

FOR IMMEDIATE RELEASE

Tradr Launches Leveraged ETFs on APLD, NBIS, JOBY, NVTX, PONY and VOYG

Latest suite of 2X long single-stock funds are all first-to-market strategies

NEW YORK, September 9, 2025 – [Tradr ETFs](#), a provider of ETFs designed for sophisticated investors and professional traders, today announced the launch of six new single stock leveraged ETFs. The funds aim to deliver twice (200%) the daily performance of a specific underlying stock.

All six funds are first-to-market strategies and are listed on Cboe:

- Tradr 2X Long APLD Daily ETF ([APLX](#)) – tracks Applied Digital Corp. (Nasdaq: APLD)
- Tradr 2X Long NBIS Daily ETF ([NEBX](#)) – tracks Nebius Group NV (Nasdaq: NBIS)
- Tradr 2X Long JOBY Daily ETF ([JOBX](#)) – tracks Joby Aviation Inc. (NYSE: JOBY)
- Tradr 2X Long NVTX Daily ETF ([NVTX](#)) – tracks Navitas Semiconductor Corp. (Nasdaq: NVTX)
- Tradr 2X Long PONY Daily ETF ([PONX](#)) – tracks Pony AI Inc. (Nasdaq: PONY)
- Tradr 2X Long VOYG Daily ETF ([VOYX](#)) – tracks Voyager Technologies Inc. (NYSE: VOYG)

"This latest set of funds represents some of the most thrilling growth stories in the market today," said Matt Markiewicz, Head of Product and Capital Markets at Tradr ETFs. "Joining ARCX, which we launched in June, JOBX and PONX give investors another opportunity to trade leaders in next-gen mobility. In addition, we continue to build out our offering of high-flying AI-infrastructure names with APLX, NEBX and NVTX."

This latest launch follows the August debut of four first-to-market leveraged single-stock ETFs LABX, DOGD, MDBX and LRCU, respectively covering Astera Labs (Nasdaq: ALAB), Datadog (Nasdaq: DDOG), MongoDB (Nasdaq: MDB) and Lam Research (Nasdaq: LRCX). In 2022, Tradr ETFs became the first issuer to launch leveraged ETFs on single stocks, starting with TSLQ for Tesla and NVDS for Nvidia.

With this launch, Tradr's lineup grows to 29 leveraged ETFs. Tradr's leveraged ETFs can be traded through most brokerage platforms and allow investors to avoid the hassle of using margin and the complexity of options trading. The firm continues its mission of providing sophisticated investors with innovative trading tools that enhance their ability to express market views with precision and efficiency.

About Tradr ETFs

Tradr ETFs are designed for sophisticated investors and professional traders who are looking to express high conviction investment views. The strategies include leveraged and inverse ETFs that seek short or long exposure to actively traded stocks and ETFs.

IMPORTANT RISK INFORMATION

Tradr ETFs are for sophisticated investors and professional traders with high conviction views and are very different from most other ETFs. The Funds are intended to be used as short-term trading vehicles and pursue leveraged investment objectives, which means they are riskier than alternatives that do not use leverage because the Funds magnify the performance of their underlying security. The volatility of the underlying security may affect a Fund's return as much as, or more than, the return of the underlying security.

Investors in the fund should: (a) understand the risks associated with the use of leverage; (b) understand the consequences of seeking inverse and leveraged investment results; (c) for short ETFs, understand the risk of shorting; (d) intend to actively monitor and manage their investment. Fund performance will likely be significantly different than the benchmark over periods longer than the specified reset period and the performance may trend in the opposite direction than its benchmark over periods other than that period.

Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Funds, and may magnify any differences between the performance of the Funds and their reference security. The Funds seek leveraged investment results for a specific period (daily, monthly or quarterly). The exact exposure of an investment in the Fund intra-period will depend upon the movement of the reference security from the end of the prior period until the time of investment by the investor.

The Fund will not attempt to position its portfolio to ensure it does not gain or lose more than a maximum percentage of its net asset value on a given trading day. As a consequence, investors in a Fund that seeks two times daily performance would lose all of their money if the Fund's underlying security moves more than 50% in a direction adverse to the Fund on a given trading day.

ETFs involve risk including possible loss of the full principal value. There is no assurance that the Fund will achieve its investment objective. Principal risks and other important risks may be found in the prospectus. Past performance does not guarantee future results.

ETF shares are bought and sold at market price (not NAV) and are not individually redeemed from the ETF. There can be no guarantee that an active trading market for ETF shares will develop or be maintained, or that their listing will continue or remain unchanged. Buying or selling ETF shares on an exchange may require the payment of brokerage commissions and frequent trading may incur brokerage costs that detract significantly from investment returns.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Funds. This and other important information about the Fund is contained in the Prospectus, which can be obtained by visiting www.tradretfs.com. The Prospectus should be read carefully before investing.
