

**FOR IMMEDIATE RELEASE**

## **Tradr's SNXX Surges to \$650 Million in Under a Month, Setting Industry Growth Record**

*Tradr 2X Long SNDK Daily ETF Becomes Fastest Growing ETF of the Past 12 Months*

**NEW YORK, February 24, 2026** – [Tradr ETFs](#), a provider of ETFs designed for sophisticated investors and professional traders, today announced that the **Tradr 2X Long SNDK Daily ETF (Cboe: [SNXX](#))** has become the fastest growing ETF launched in the past 12 months, as measured by average assets gathered per day since inception.

Launched on January 27, 2026, SNXX amassed \$650 million in assets under management in just 24 days, averaging over \$27 million in net new AUM per day since inception as of February 20, 2026. The fund is now the fifth-largest single-stock ETF in the U.S. market, behind only TSL, NVDL, GLL and MUU, according to data from Bloomberg.

SNXX seeks to deliver 200% of the daily performance of Sandisk Corp. (Nasdaq: SNDK), offering traders a capital-efficient vehicle to express high conviction views without the need for margin accounts or options strategies.

The strong adoption of SNXX follows continued demand for Tradr's recently launched single-stock ETFs. The Tradr 2X Long LITE Daily ETF (Cboe: [LITX](#)) has gathered approximately \$200 million in AUM within its first month, while the Tradr 2X Long WDC Daily ETF (Cboe: [WDCX](#)) has accumulated approximately \$40 million over the same period (all data as of February 20, 2026).

"The speed of adoption we're seeing in our recent launches demonstrates real unmet market demand," said Russell Tencer, President of Tradr ETFs. "Traders and active investors are voting with their capital for the precision trading products Tradr is delivering."

Tradr ETFs is the pioneer of single-stock ETF exposures in the U.S. and is currently the fastest growing provider in the category. With a focus on precision tools for active market participants, Tradr empowers traders to access amplified exposure to individual stocks in a transparent, exchange-traded structure.

Tradr's lineup of 69 leveraged ETFs represents \$2.7 billion in assets under management. For detailed information on Tradr ETFs and the significant risks involved with leveraged ETFs, please visit [www.tradretfs.com](http://www.tradretfs.com).

**About Tradr ETFs**

**Tradr ETFs** are designed for sophisticated investors and professional traders who are looking to express high conviction investment views. The strategies include leveraged and inverse ETFs that seek short or long exposure to actively traded stocks and ETFs.

## IMPORTANT RISK INFORMATION

Tradr ETFs are for sophisticated investors and professional traders with high conviction views and are very different from most other ETFs. The Funds are intended to be used as short-term trading vehicles and pursue leveraged investment objectives, which means they are riskier than alternatives that do not use leverage because the Funds magnify the performance of their underlying security. The volatility of the underlying security may affect a Fund's return as much as, or more than, the return of the underlying security.

Investors in the fund should: (a) understand the risks associated with the use of leverage; (b) understand the consequences of seeking inverse and leveraged investment results; (c) for short ETFs, understand the risk of shorting; (d) intend to actively monitor and manage their investment. Fund performance will likely be significantly different than the benchmark over periods longer than the specified reset period and the performance may trend in the opposite direction than its benchmark over periods other than that period.

Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Funds, and may magnify any differences between the performance of the Funds and their reference security. The Funds seek leveraged investment results for a specific period (daily, monthly or quarterly). The exact exposure of an investment in the Fund intra-period will depend upon the movement of the reference security from the end of the prior period until the time of investment by the investor.

The Fund will not attempt to position its portfolio to ensure it does not gain or lose more than a maximum percentage of its net asset value on a given trading day. As a consequence, investors in a Fund that seeks two times daily performance would lose all of their money if the Fund's underlying security moves more than 50% in a direction adverse to the Fund on a given trading day.

ETFs involve risk including possible loss of the full principal value. There is no assurance that the Fund will achieve its investment objective. Principal risks and other important risks may be found in the prospectus. Past performance does not guarantee future results.

ETF shares are bought and sold at market price (not NAV) and are not individually redeemed from the ETF. There can be no guarantee that an active trading market for ETF shares will develop or be maintained, or that their listing will continue or remain unchanged. Buying or selling ETF shares on an exchange may require the payment of brokerage commissions and frequent trading may incur brokerage costs that detract significantly from investment returns.

**Investors should carefully consider the investment objectives, risks, charges and expenses of the Funds. This and other important information about the Fund is contained in the Prospectus, which can be obtained by visiting [www.tradretfs.com](http://www.tradretfs.com). The Prospectus should be read carefully before investing.**
