October 31, 2026

Each Fund is a series of Investment Managers Series Trust II. Shares of each Fund are listed on the Cboe BZX Exchange, Inc. (the "Cboe Exchange" or "Exchange").

Shares of each Fund trade on the Exchange at market prices that may be below, at or above a Fund's net asset value per share. The Funds are not suitable for all investors and are designed to be utilized only by sophisticated investors who understand the risks associated with the use of derivatives, are willing to assume a high degree of risk, and intend to actively monitor and manage their investments in the Fund.

Neither the U.S. Securities and Exchange Commission (the "SEC") nor the Commodity Futures Trading Commission (the "CFTC") has approved or disapproved these securities or passed upon the accuracy or adequacy of this prospectus. Any representation to the contrary is a criminal offense.

The Funds seek daily long leveraged investment results and are intended to be used as short-term trading vehicles. Each Fund attempts to provide daily investment results that correspond to the respective long leveraged multiple of the performance of an underlying security and are collectively referred to as the "Funds."

The Funds are not intended to be used by, and are not appropriate for, investors who do not intend to actively monitor and manage their portfolios. The Funds are very different from most mutual funds and exchange-traded funds. Investors should note that the pursuit of daily investment objectives means that the return of a Fund for a period longer or shorter than a full trading day will be the product of a series of daily leveraged returns for each trading day during the relevant period. As a consequence, especially in periods of market volatility, the volatility of the underlying security may affect a Fund's return as much as, or more than, the return of the underlying security. Further, the return for investors that invest for periods less than a full trading day will not be the product of the return of a Fund's stated daily long leveraged investment objective and the performance of the underlying security for the full trading day. During periods of high volatility, the Funds may not perform as expected and the Funds may have losses when an investor may have expected gains if the Funds are held for a period that is different than one trading day.

These Funds are not suitable for all investors. These Funds are designed to be utilized only by sophisticated investors, such as traders and active investors employing dynamic strategies. Investors in the Funds should:

(a) understand the risks associated with the use of leverage;

(b) understand the consequences of seeking daily leveraged investment results; and

(c) intend to actively monitor and manage their investments.

Investors who do not understand the Funds, or do not intend to actively manage their funds and monitor their investments, should not buy the Funds.

There is no assurance that any Fund will achieve its investment objective and an investment in a Fund could lose money. No single Fund is a complete investment program.

The Funds' investment advisor, AXS Investments, LLC (the "Advisor" or "AXS"), will not attempt to position each Fund's portfolio to ensure that a Fund does not gain or lose more than a maximum percentage of its net asset value on a given trading day. As a consequence, if a Fund's underlying security moves more than 50% on a given trading day in a direction adverse to the Fund, the Fund's investors would lose all of their money.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG FCEL DAILY ETF

The Tradr 2X Long FCEL Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the common shares of FuelCell Energy, Inc. (The Nasdaq Stock Market LLC ("Nasdaq"): FCEL) ("FCEL"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of FCEL for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of FCEL for that period. Longer holding periods, higher volatility of FCEL and leverage increase the impact of compounding on an investor's returns. During periods of higher FCEL volatility, the volatility of FCEL may affect the Fund's return as much as, or more than, the return of FCEL.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if FCEL's performance is flat, and it is possible that the Fund will lose money even if FCEL's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if FCEL loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long FCEL Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of FCEL. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of FCEL. This may include FCEL stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of FCEL for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on FCEL and/or investing directly in the common stock of FCEL. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of FCEL is typically less efficient than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on FCEL. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing FCEL. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of FCEL stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to FCEL, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of FCEL, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of FCEL over the same period. As a result of its investment strategies, the Fund will be concentrated in the industry assigned to FCEL (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to FCEL). FCEL is assigned to the Electrical Equipment & Parts industry as of the date of this prospectus.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

FCEL is a clean energy technology company and a stationary fuel cell manufacturer with more than 20 years of operating experience in this field. FCEL manufactures and sells proprietary molten carbonate fuel cell systems, which generate large-scale, continuous power and support emissions management applications. Its fuel cell systems are designed to provide reliable baseload power and can also support carbon capture and combined heat and power applications. FCEL is headquartered in Danbury, Connecticut. As of July 10, 2026, FCEL had a market capitalization of approximately $1.8 billion.

FCEL is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by FCEL pursuant to the Exchange Act can be located by reference to the SEC file number 001-14204 through the SEC's website at www.sec.gov. In addition, information regarding FCEL may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding FCEL from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of FCEL. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding FCEL is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of FCEL have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning FCEL could affect the value of the Fund's investments with respect to FCEL and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of FCEL.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if FCEL has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if FCEL reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and FCEL. Because the Fund includes a multiplier of two times (200%) FCEL, a single-trading day decline in FCEL approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of the Fund, even if FCEL subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in FCEL, even if FCEL maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of FCEL for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as FCEL volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) FCEL volatility; (b) FCEL performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — FCEL volatility and FCEL performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of FCEL volatility and FCEL performance over a one-year period. Actual volatility, FCEL and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of FCEL and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of FCEL. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year FCEL	200% One Year FCEL	Volatility Rate				
Return	**Return**	**10%**	**25%**	**50%**	**75%**	**100%**
-60%	**-120%**	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	**-100%**	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	**-80%**	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	**-60%**	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	**-40%**	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	**-20%**	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	**0%**	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	**20%**	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	**40%**	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	**60%**	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	**80%**	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	**100%**	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	**120%**	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of FCEL's volatility and FCEL's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if FCEL's return were 20%, absent the effects of compounding. As the table shows, with FCEL's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

FCEL's annualized historical volatility rate for the five-year period ended December 31, 2025 was 95.6%. FCEL's highest volatility rate for any one calendar year during the period was 104.4%. FCEL's annualized total return performance for the five-year period ended December 31, 2025 was -53.5%. Historical FCEL volatility and performance are not indications of what FCEL volatility and performance will be in the future. The volatility of U.S. exchange-traded securities or instruments that reflect the value of FCEL may differ from the volatility of FCEL.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with FCEL, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of FCEL on such day.

In order to achieve a high degree of correlation with FCEL, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to FCEL may prevent the Fund from achieving a high degree of correlation with FCEL and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by FCEL's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when FCEL is volatile, particularly when FCEL is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with FCEL, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with FCEL. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to FCEL. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of FCEL. Any of these factors could decrease correlation between the performance of the Fund and FCEL and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to FCEL that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of FCEL are listed on the Nasdaq and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although FCEL's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in FCEL's shares and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap

counterparties that are necessary to implement the Fund's investment strategy. Trading halts of FCEL's shares and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of FCEL's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting FCEL's shares will result in a trading halt of the Fund's Shares. To the extent trading in FCEL's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. FCEL is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of FCEL in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of FCEL.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to FCEL until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of FCEL.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with FCEL.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor

shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as AI and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to FCEL (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to FCEL). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Electrical Equipment & Parts Industry Risk. The Fund is subject to electrical equipment and parts industry risk due to its investment exposure to FCEL. The electrical equipment and parts industry is exposed to risks arising from cyclical demand, reliance on global supply chains, and sensitivity to raw material and energy costs. Businesses in this sector face competitive pressures, rapid technological change, and the need for continuous innovation to meet evolving efficiency, safety, and sustainability standards. Regulatory requirements related to product safety, environmental compliance, and energy usage may increase costs or restrict certain markets. Supply chain disruptions, shortages of key components, and reliance on specialized labor can also affect production and delivery capabilities. In addition, fluctuations in construction activity, industrial investment, and overall economic conditions directly influence demand. These factors collectively may materially impact the performance and profitability of companies in the industry.

Energy Sector Risk. The Fund is subject to the energy sector risk due to its investment exposure to FCEL. Issuers in energy-related industries can be significantly affected by fluctuations in energy prices and supply and demand of energy fuels caused by geopolitical events, energy conservation or use of alternative fuel sources, the success of exploration projects, weather or meteorological events, taxes, increased governmental or environmental regulation, resource depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, or terrorist threats or attacks, among others. Markets for various energy-related commodities can have significant volatility, and are subject to control or manipulation by large producers or purchasers. Companies in the energy sector may need to make substantial expenditures, and to incur significant amounts of debt, in order to maintain or expand their reserves through exploration of new sources of supply, through the development of existing sources, through acquisitions, or through long-term contracts to acquire reserves. Factors adversely affecting producers, refiners, distributors, or others in the energy sector may affect adversely companies that service or supply those entities, either because demand for those services or products is curtailed, or those services or products come under price pressure.

Industrials Sector Risk. The Fund is subject to industrials sector risk due to its investment exposure to FCEL. Industrial companies are affected by supply and demand both for their specific product or service and for industrial sector products and services in general. Government regulation, world events, exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies. Aerospace and defense companies, a component of the industrial sector, can be significantly affected

by government spending policies because companies involved in this industry rely, to a significant extent, on U.S. and foreign government demand for their products and services. Thus, the financial condition of, and investor interest in, aerospace and defense companies are heavily influenced by governmental defense spending policies which are typically under pressure from efforts to control the U.S. (and other) government budgets.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration

measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Small-Cap Company Risk. The Fund is subject to small-cap company risk due to its investment exposure to FCEL. The securities of small-capitalization companies may be subject to more abrupt or erratic market movements and may have lower trading volumes or more erratic trading than securities of larger, more established companies or market averages in general. In addition, such companies typically are more likely to be adversely affected than large capitalization companies by changes in earning results, business prospects, investor expectations or poor economic or market conditions.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate

significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG FIX DAILY ETF

The Tradr 2X Long FIX Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the common shares of Comfort Systems USA, Inc. (New York Stock Exchange ("NYSE"): FIX) ("FIX"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of FIX for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of FIX for that period. Longer holding periods, higher volatility of FIX and leverage increase the impact of compounding on an investor's returns. During periods of higher FIX volatility, the volatility of FIX may affect the Fund's return as much as, or more than, the return of FIX.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if FIX's performance is flat, and it is possible that the Fund will lose money even if FIX's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if FIX loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long FIX Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of FIX. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of FIX. This may include FIX stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of FIX for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on FIX and/or investing directly in the common stock of FIX. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of FIX is typically less efficient than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on FIX. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing FIX. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of FIX stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to FIX, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of FIX, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of FIX over the same period. As a result of its investment strategies, the Fund will be concentrated in the industry assigned to FIX (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to FIX). FIX is assigned to the Engineering and Construction industry as of the date of this prospectus.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

FIX provides mechanical and electrical contracting services. FIX's mechanical segment principally includes heating, ventilation and air conditioning ("HVAC"), plumbing, piping and controls, as well as off-site construction, monitoring and fire protection. FIX's electrical segment includes installation and servicing of electrical systems. FIX builds, installs, maintains, repairs and replaces mechanical, electrical and plumbing ("MEP") systems through its 50 operating units with 190 locations in 142 cities throughout the United States. FIX primarily serves commercial, industrial and institutional customers across manufacturing, healthcare, education, office, technology, retail and government facilities FIX is headquartered in Houston, Texas. As of July 10, 2026, FIX had a market capitalization of approximately $59.3 billion.

FIX is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by FIX pursuant to the Exchange Act can be located by reference to the SEC file number 001-13011 through the SEC's website at www.sec.gov. In addition, information regarding FIX may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding FIX from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of FIX. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding FIX is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of FIX have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning FIX could affect the value of the Fund's investments with respect to FIX and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of FIX.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if FIX has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if FIX reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and FIX. Because the Fund includes a multiplier of two times (200%) FIX, a single-trading day decline in FIX approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of the Fund, even if FIX subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in FIX, even if FIX maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of FIX for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as FIX volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) FIX volatility; (b) FIX performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — FIX volatility and FIX performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of FIX volatility and FIX performance over a one-year period. Actual volatility, FIX and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of FIX and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of FIX. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year FIX	200% One Year FIX	Volatility Rate				
Return	Return	10%	25%	50%	75%	100%
-60%	-120%	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	-100%	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	-80%	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	-60%	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	-40%	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	-20%	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	0%	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	20%	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	40%	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	60%	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	80%	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	100%	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	120%	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of FIX's volatility and FIX's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if FIX's return were 20%, absent the effects of compounding. As the table shows, with FIX's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

FIX's annualized historical volatility rate for the five-year period ended December 31, 2025 was 43.0%. FIX's highest volatility rate for any one calendar year during the period was 61.0%. FIX's annualized total return performance for the five-year period ended December 31, 2025 was 78.6%. Historical FIX volatility and performance are not indications of what FIX volatility and performance will be in the future. The volatility of U.S. exchange-traded securities or instruments that reflect the value of FIX may differ from the volatility of FIX.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with FIX, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of FIX on such day.

In order to achieve a high degree of correlation with FIX, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to FIX may prevent the Fund from achieving a high degree of correlation with FIX and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by FIX's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when FIX is volatile, particularly when FIX is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with FIX, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with FIX. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to FIX. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of FIX. Any of these factors could decrease correlation between the performance of the Fund and FIX and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to FIX that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of FIX are listed on the NYSE and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although FIX's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in

FIX's shares and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund's investment strategy. Trading halts of FIX's shares and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of FIX's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting FIX's shares will result in a trading halt of the Fund's Shares. To the extent trading in FIX's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. FIX is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of FIX in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of FIX.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to FIX until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of FIX.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with FIX.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate

earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as AI and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to FIX (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to FIX). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Engineering and Construction Industry Risk. The Fund is subject to engineering and construction industry risk due to its investment exposure to FIX. Companies in the engineering and construction industry may be significantly affected by changes in demand for their specific products or services, government spending, zoning laws, general economic conditions, interest rates, commodity prices, consumer confidence and spending, taxation, demographic patterns, real estate values, labor relations and government regulations. Such companies are also at risk from technical obsolescence and delays in modernization. Certain engineering and construction companies may also be significantly affected by environmental clean-up costs and catastrophic events such as earthquakes, hurricanes, tornadoes and terrorist acts.

Industrials Sector Risk. The Fund is subject to industrials sector risk due to its investment exposure to FIX. Industrial companies are affected by supply and demand both for their specific product or service and for industrial sector products and services in general. Government regulation, world events, exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies. Aerospace and defense companies, a component of the industrial sector, can be significantly affected by government spending policies because companies involved in this industry rely, to a significant extent, on U.S. and foreign government demand for their products and services. Thus, the financial condition of, and investor interest in, aerospace and defense companies are heavily influenced by governmental defense spending policies which are typically under pressure from efforts to control the U.S. (and other) government budgets. Transportation securities, another component of the industrial sector, are cyclical and have occasional sharp price movements which may result from changes in the economy, fuel prices, labor agreements and insurance costs.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality

issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Large-Cap Company Risk. The Fund is subject to large-cap company risk due to its investment exposure to FIX. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large-capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose

outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG FRVO DAILY ETF

The Tradr 2X Long FRVO Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the common shares of Fervo Energy Co. (The Nasdaq Stock Market LLC ("Nasdaq"): FRVO) ("FRVO"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of FRVO for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of FRVO for that period. Longer holding periods, higher volatility of FRVO and leverage increase the impact of compounding on an investor's returns. During periods of higher FRVO volatility, the volatility of FRVO may affect the Fund's return as much as, or more than, the return of FRVO.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if FRVO's performance is flat, and it is possible that the Fund will lose money even if FRVO's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if FRVO loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long FRVO Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of FRVO. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of FRVO. This may include FRVO stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of FRVO for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on FRVO and/or investing directly in the common stock of FRVO. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of FRVO is typically less efficient than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on FRVO. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing FRVO. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of FRVO stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to FRVO, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of FRVO, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of FRVO over the same period. As a result of its investment strategies, the Fund will be concentrated in the industry assigned to FRVO (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to FRVO). FRVO is assigned to the Electric Utilities industry as of the date of this prospectus.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

FRVO's business is to commercialize technology to build, own, and operate geothermal assets. FRVO's innovations include technologies such as advanced computational models, horizontal drilling, and distributed fiber optic sensing to increase the productivity and lifetime of geothermal wells. FRVO's operations are primarily located in the western United States. FRVO is headquartered in Houston, Texas. As of July 10, 2026, FRVO had a market capitalization of approximately $7.0 billion.

FRVO is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by FRVO pursuant to the Exchange Act can be located by reference to the SEC file number 001-43285 through the SEC's website at www.sec.gov. In addition, information regarding FRVO may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding FRVO from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of FRVO. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding FRVO is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of FRVO have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning FRVO could affect the value of the Fund's investments with respect to FRVO and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of FRVO.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if FRVO has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if FRVO reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and FRVO. Because the Fund includes a multiplier of two times (200%) FRVO, a single-trading day decline in FRVO approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of the Fund, even if FRVO subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in FRVO, even if FRVO maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of FRVO for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as FRVO volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) FRVO volatility; (b) FRVO performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — FRVO volatility and FRVO performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of FRVO volatility and FRVO performance over a one-year period. Actual volatility, FRVO and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of FRVO and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of FRVO. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year FRVO	200% One Year FRVO	Volatility Rate				
Return	**Return**	**10%**	**25%**	**50%**	**75%**	**100%**
-60%	**-120%**	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	**-100%**	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	**-80%**	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	**-60%**	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	**-40%**	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	**-20%**	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	**0%**	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	**20%**	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	**40%**	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	**60%**	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	**80%**	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	**100%**	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	**120%**	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of FRVO's volatility and FRVO's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if FRVO's return were 20%, absent the effects of compounding. As the table shows, with FRVO's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

As of the date of this prospectus, volatility rates for FRVO are not yet available.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with FRVO, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of FRVO on such day.

In order to achieve a high degree of correlation with FRVO, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to FRVO may prevent the Fund from achieving a high degree of correlation with FRVO and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by FRVO's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when FRVO is volatile, particularly when FRVO is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with FRVO, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with FRVO. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to FRVO. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of FRVO. Any of these factors could decrease correlation between the performance of the Fund and FRVO and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to FRVO that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of FRVO are listed on the Nasdaq and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although FRVO's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in FRVO's shares and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund's investment strategy. Trading halts of FRVO's shares and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has

pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of FRVO's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting FRVO's shares will result in a trading halt of the Fund's Shares. To the extent trading in FRVO's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. FRVO is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of FRVO in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of FRVO.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to FRVO until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of FRVO.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with FRVO.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or

global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as AI and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to FRVO (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to FRVO). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Electric Utilities Industry Risk. The Fund is subject to electric utilities industry risk due to its investment exposure to FRVO. The electrical utilities industry can be significantly affected by general economic trends, including employment, economic growth, interest rates, and changes in commodity prices. Electric utilities companies are subject to the risks of technical obsolescence, and their profitability may be affected by government regulation and spending, import controls and worldwide competition. Companies in these industries also can be adversely affected by liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution control. These factors may result in a material adverse impact on the Fund's portfolio securities and the performance of the Fund.

Energy Sector Risk. The Fund is subject to energy sector risk due to its investment exposure to FRVO. Issuers in energy-related industries can be significantly affected by fluctuations in energy prices and supply and demand of energy fuels caused by geopolitical events, energy conservation or use of alternative fuel sources, the success of exploration projects, weather or meteorological events, taxes, increased governmental or environmental regulation, resource depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, or terrorist threats or attacks, among others. Markets for various energy-related commodities can have significant volatility, and are subject to control or manipulation by large producers or purchasers. Companies in the energy sector may need to make substantial expenditures, and to incur significant amounts of debt, in order to maintain or expand their reserves through exploration of new sources of supply, through the development of existing sources, through acquisitions, or through long-term contracts to acquire reserves. Factors adversely affecting producers, refiners, distributors, or others in the energy sector may affect adversely companies that service or supply those entities, either because demand for those services or products is curtailed, or those services or products come under price pressure.

Renewable Energy Company Risk. The Fund is subject to renewable energy company risk due to its investment exposure to FRVO. The value of Fund Shares may be affected by events that adversely affect companies in renewable energy industry. These can include adverse political and regulatory changes, poor weather conditions for renewable power generation, falling power prices, technological obsolescence, competition and general economic conditions.

Utilities Sector Risk. The Fund is subject to utilities sector risk due to its investment exposure to FRVO. Companies in the utilities sector are subject to a variety of factors that may adversely affect their business or operations, including high interest costs associated with capital construction and improvement programs; difficulty in raising adequate capital

in periods of high inflation and unsettled capital markets; governmental regulation of rates the issuer can charge to customers; costs associated with compliance with environmental and other regulations; effects of economic slowdowns and surplus capacity; increased competition; and potential losses resulting from a developing deregulatory environment.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account

the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Mid-Cap Company Risk. The Fund is subject to mid-cap company risk due to its investment exposure to FRVO. The securities of small-capitalization companies may be subject to more abrupt or erratic market movements and may have lower trading volumes or more erratic trading than securities of larger, more established companies or market averages in general. In addition, such companies typically are more likely to be adversely affected than large capitalization companies by changes in earning results, business prospects, investor expectations or poor economic or market conditions.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to,

the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG IQMX DAILY ETF

The Tradr 2X Long IQMX Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the common shares of IQM Quantum Company Oyj. (Nasdaq Stock Market LLC ("Nasdaq"): IQMX) ("IQMX"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of IQMX for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of IQMX for that period. Longer holding periods, higher volatility of IQMX and leverage increase the impact of compounding on an investor's returns. During periods of higher IQMX volatility, the volatility of IQMX may affect the Fund's return as much as, or more than, the return of IQMX.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if IQMX's performance is flat, and it is possible that the Fund will lose money even if IQMX's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if IQMX loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long IQMX Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of IQMX. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of IQMX. This may include IQMX stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of IQMX for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on IQMX and/or investing directly in the common stock of IQMX. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of IQMX is typically less efficient than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on IQMX. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing IQMX. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of IQMX stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to IQMX, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of IQMX, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of IQMX over the same period. As a result of its investment strategies, the Fund will be concentrated in the industry assigned to IQMX (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to IQMX). IQMX is assigned to the Computer Hardware industry as of the date of this prospectus.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

IQMX is a global leader in superconducting quantum computing, delivering full-stack quantum systems and cloud platform access to enterprises, research institutions, high-performance computing centers, and national laboratories worldwide. IQMX's open and modular architecture enables customers to own, control, and integrate quantum systems directly into their workflows. Founded in 2018, IQMX is headquartered in Espoo, Finland, with major operations in Munich, Germany. As of July 10, 2026, IQMX had a market capitalization of approximately $74.9 million. The Fund invests in the American Depositary Shares ("ADSs") of IQMX, which are listed on Nasdaq. Ordinary shares of IQMX are listed on Nasdaq Helsinki Ltd under the symbol "IQM."

IQMX is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by IQMX pursuant to the Exchange Act can be located by reference to the SEC file number 001-43383 through the SEC's website at www.sec.gov. In addition, information regarding IQMX may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding IQMX from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of IQMX. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding IQMX is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of IQMX have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning IQMX could affect the value of the Fund's investments with respect to IQMX and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of IQMX.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if IQMX has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if IQMX reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and IQMX. Because the Fund includes a multiplier of two times (200%) IQMX, a single-trading day decline in IQMX approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of the Fund, even if IQMX subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in IQMX, even if IQMX maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of IQMX for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as IQMX volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) IQMX volatility; (b) IQMX performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — IQMX volatility and IQMX performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of IQMX volatility and IQMX performance over a one-year period. Actual volatility, IQMX and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of IQMX and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of IQMX. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year IQMX	200% One Year IQMX	Volatility Rate				
Return	**Return**	**10%**	**25%**	**50%**	**75%**	**100%**
-60%	**-120%**	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	**-100%**	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	**-80%**	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	**-60%**	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	**-40%**	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	**-20%**	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	**0%**	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	**20%**	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	**40%**	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	**60%**	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	**80%**	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	**100%**	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	**120%**	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of IQMX's volatility and IQMX's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if IQMX's return were 20%, absent the effects of compounding. As the table shows, with IQMX's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

As of the date of this prospectus, volatility rates for IQMX are not yet available.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with IQMX, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of IQMX on such day.

In order to achieve a high degree of correlation with IQMX, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to IQMX may prevent the Fund from achieving a high degree of correlation with IQMX and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by IQMX's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when IQMX is volatile, particularly when IQMX is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with IQMX, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with IQMX. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to IQMX. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of IQMX. Any of these factors could decrease correlation between the performance of the Fund and IQMX and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to IQMX that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of IQMX are listed on the Nasdaq and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although IQMX's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in IQMX's shares and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap

counterparties that are necessary to implement the Fund's investment strategy. Trading halts of IQMX's shares and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of IQMX's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting IQMX's shares will result in a trading halt of the Fund's Shares. To the extent trading in IQMX's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. IQMX is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of IQMX in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of IQMX.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to IQMX until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of IQMX.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with IQMX.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as AI and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to IQMX (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to IQMX). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Computer Hardware Industry Risk. The Fund is subject to computer hardware industry risk due to its investment exposure to IQMX. The computer hardware industry includes companies that manufacture and distribute computers, servers, mainframes, peripheral devices (e.g., keyboard, mouse, etc.), high-technology components (e.g., circuit boards), and electronic office equipment. In addition, companies in the computer hardware industry include producers and distributors of semiconductors and other integrated chips, other products related to the semiconductor industry such as motherboards, and manufacturers of high-technology tools and/or equipment used in the creation of semiconductors, photonics, wafers, and other high-technology components. Companies in the computer hardware industry can be significantly affected by competitive pressures, aggressive pricing, technological developments, changing domestic demand, the ability to attract and retain skilled employees, and availability and price of components. The market for products produced by companies in the computer hardware industry is characterized by rapidly changing technology, rapid product obsolescence, cyclical market patterns, evolving industry standards and frequent new product introductions. An unexpected change in one or more of the technologies affecting an issuer's products or in the market for products based on a particular technology could have a material adverse effect on a participant's operating results. Many of the companies in the computer hardware industry rely on a combination of patents, copyrights, trademarks and trade secret laws to establish and protect their proprietary rights in their products and technologies. There can be no assurance that the steps taken by the companies to protect their proprietary rights will be adequate to prevent misappropriation of their technology or that competitors will not independently develop technologies that are substantially equivalent or superior to such companies' technology.

Information Technology Sector Risk. The Fund is subject to information technology sector risk due to its investment exposure to IQMX. The information technology sector includes companies engaged in internet software and services, technology hardware and storage peripherals, electronic equipment instruments and components, and semiconductors and semiconductor equipment. Information technology companies face intense competition, both domestically and

internationally, which may have an adverse effect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face rapid product obsolescence due to technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Failure to introduce new products, develop and maintain a loyal customer base, or achieve general market acceptance for their products could have a material adverse effect on a company's business. Companies in the information technology sector are heavily dependent on intellectual property and the loss of patent, copyright and trademark protections may adversely affect the profitability of these companies.

Quantum Computing Risk. The Fund is subject to quantum computing risk due to its investment exposure to IQMX. Companies engaged in the development of quantum computing or machine learning technology may be significantly impacted by rapid technological advancements, product obsolescence, intense competition, consumer demand, and government regulation. Such companies are also heavily dependent upon patent and intellectual property rights. A company's success in obtaining or protecting a patent related to quantum computing or machine learning, including the associated costs, are critical factors that may affect such company's profitability. In addition, tariffs placed on specialized components and/or raw materials used by such companies may increase costs and delay progress associated with research and development in quantum computing and machine learning.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before

expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Micro-Cap Company Risk. The Fund is subject to micro-cap company risk due to its investment exposure to IQMX. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses). Their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Finland Risk. Due to the Fund's exposure to IQMX, the Fund will be susceptible to legal, regulatory, political, currency, security, and economic risks specific to Finland. Finland's economy, among other things, depends on imported raw materials, energy and components for its manufactured products. As a result, Finland is dependent on trading relationships with certain key trading partners, including Germany, Sweden, Russia and the U.S.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets

as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG NASA DAILY ETF

The Tradr 2X Long NASA Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the Tema Space Innovators ETF. (NYSE Arca: NASA) ("NASA"). The return for invesrs that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of NASA for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of NASA for that period. Longer holding periods, higher volatility of NASA and leverage increase the impact of compounding on an investor's returns. During periods of higher NASA volatility, the volatility of NASA may affect the Fund's return as much as, or more than, the return of NASA.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if NASA's performance is flat, and it is possible that the Fund will lose money even if NASA's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if NASA loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long NASA Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of NASA. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of NASA. This may include NASA stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of NASA for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on NASA and/or investing directly in the common stock of NASA. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of NASA is typically less efficient than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on NASA. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing NASA. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of NASA stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to NASA, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver

cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of NASA, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of NASA over the same period. As a result of its investment strategies, the Fund will be concentrated (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure) to the same extent as NASA is so concentrated.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

NASA is an ETF that, under normal circumstances, seeks to achieve its investment objective by investing at least 80% of its net assets, which include borrowings for investment purposes, in domestic and foreign, common and preferred stocks of publicly listed companies that are engaged in "space-related business". A company is engaged in "space-related business" if at least 50% of their annual revenue is related to products or services performing any kind of function that is carried out by hardware, software or humans physically located in space. As of July 10, 2026, NASA had net assets of approximately $1.3 billion.

Tema ETFs LLC is the investment advisor to NASA. Shares of NASA are listed on the NYSE. The prospectus for NASA indicates that NASA will concentrate in the following industries: communications, industrials, information technology and materials. NASA also invests a significant amount of its total assets in the aerospace and defense sector. As of September 30, 2026, NASA had approximately $1.14 billion in assets under management.

Information provided to or filed with the SEC by NASA can be located by reference to the SEC file numbers 811-23823 and 333-267188 through the SEC's website at www.sec.gov.

The Fund has derived all disclosures contained in this document regarding NASA from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of NASA. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding NASA is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of NASA have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning NASA could affect the value of the Fund's investments with respect to NASA and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of NASA.

THE TRADR 2X LONG NASA DAILY ETF, INVESTMENT MANAGERS SERIES TRUST II, AND AXS INVESTMENTS LLC ARE NOT AFFILIATED WITH NASA, TEMA ETF TRUST, OR TEMA ETFs LLC.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if NASA has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if NASA reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and NASA. Because the Fund includes a multiplier of two times (200%) NASA, a single-trading day decline in NASA approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective

of the Fund, even if NASA subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in NASA, even if NASA maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of NASA for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as NASA volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) NASA volatility; (b) NASA performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — NASA volatility and NASA performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of NASA volatility and NASA performance over a one-year period. Actual volatility, NASA and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of NASA and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of NASA. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year NASA	200% One Year NASA	Volatility Rate				
Return	**Return**	**10%**	**25%**	**50%**	**75%**	**100%**
-60%	**-120%**	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	**-100%**	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	**-80%**	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	**-60%**	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	**-40%**	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	**-20%**	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	**0%**	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	**20%**	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	**40%**	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	**60%**	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	**80%**	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	**100%**	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	**120%**	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of NASA's volatility and NASA's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if NASA's return were 20%, absent the effects of compounding. As the table shows, with NASA's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

As of the date of this prospectus, volatility rates for NASA are not yet available.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with NASA, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of NASA on such day.

In order to achieve a high degree of correlation with NASA, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to NASA may prevent the Fund from achieving a high degree of correlation with NASA and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by NASA's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when NASA is volatile, particularly when NASA is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with NASA, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with NASA. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to NASA. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of NASA. Any of these factors could decrease correlation between the performance of the Fund and NASA and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to NASA that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of NASA are listed on the NYSE Arca and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although NASA's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in NASA's shares and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund's investment strategy. Trading halts of NASA's shares and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the

security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of NASA's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting NASA's shares will result in a trading halt of the Fund's Shares. To the extent trading in NASA's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. NASA is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of NASA in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of NASA.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to NASA until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of NASA.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with NASA.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity

events, technological advances (such as AI and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to NASA (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to NASA). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Aerospace and Defense Industry Risk. The Fund is subject to aerospace and defense industry risk due to its investment exposure to NASA. Aerospace and defense companies are subject to numerous risks, including fierce competition, consolidation, adverse political, economic and governmental developments, substantial research and development costs, cuts in government funding, product and technology obsolescence, limited numbers of potential customers and decreased demand for new equipment. In addition, companies involved in the commercial aerospace industry are also subject to aircraft order cancellations, changes in aircraft-leasing contracts, excess capacity, cutbacks in profitable business travel, fuel price hikes, labor union settlements, adverse changes in international politics and relations, intense global competition, government regulation and cyclical market patterns. Aerospace and defense companies rely heavily on U.S. Government and other government demand for their products and services. As a result, these companies could be adversely impacted by future reductions or changes in government spending. Such government spending on aerospace and defense is not generally correlated with economic cycles, but rather with general political support for this type of spending. There is no assurance that future levels of spending on aerospace and defense will increase or that such spending will not decrease in the future. Competition, labor relations and the price of fuel can impact aerospace and defense companies. In addition, deregulation of airlines has substantially decreased the U.S. Government's role in the air transport industry while promoting competition. However, the profitability of individual carriers as well as the entire industry could be impacted by the regulations and policies of various domestic and foreign governments.

Industrials Sector Risk. The Fund is subject to industrials sector risk due to its investment exposure to NASA. Industrial companies are affected by supply and demand both for their specific product or service and for industrial sector products and services in general. Government regulation, world events, exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies. Aerospace and defense companies, a component of the industrial sector, can be significantly affected by government spending policies because companies involved in this industry rely, to a significant extent, on U.S. and foreign government demand for their products and services. Thus, the financial condition of, and investor interest in, aerospace and defense companies are heavily influenced by governmental defense spending policies which are typically under pressure from efforts to control the U.S. (and other) government budgets. Transportation securities, another component of the industrial sector, are cyclical and have occasional sharp price movements which may result from changes in the economy, fuel prices, labor agreements and insurance costs.

Information Technology Sector Risk. The Fund is subject to the information technology sector risk due to its investment exposure to NASA. The information technology sector includes companies engaged in internet software and services, technology hardware and storage peripherals, electronic equipment instruments and components, and semiconductors and semiconductor equipment. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face rapid product obsolescence due to technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Failure to introduce new products, develop and maintain a loyal customer base, or achieve general market acceptance for their products could have a material adverse effect on a company's business. Companies in the information technology sector are heavily dependent on intellectual property and the loss of patent, copyright and trademark protections may adversely affect the profitability of these companies.

Materials Sector Risk. The Fund is subject to the materials sector risk due to its investment exposure to NASA. Performance of companies in the materials sector can be significantly impacted by the level and volatility of commodity prices, the exchange value of the dollar, import and export controls, increased competition, liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution controls.

Telecommunications Sector Risk. The Fund is subject to the materials sector risk due to its investment exposure to NASA. The telecommunications sector is subject to extensive government regulation. The costs of complying with governmental regulations, delays or failure to receive required regulatory approvals or the enactment of new adverse regulatory requirements may adversely affect the business of the telecommunications companies. The telecommunications sector can also be significantly affected by intense competition, including competition with alternative technologies such as wireless communications, product compatibility, consumer preferences, rapid obsolescence and research and development of new 16 products. Other risks include those related to regulatory changes, such as the uncertainties resulting from such companies' diversification into new domestic and international businesses, as well as agreements by any such companies linking future rate increases to inflation or other factors not directly related to the actual operating profits of the otherwise.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Market Capitalization Risk. The Fund is subject to market capitalization risk due to its investment exposure to NASA. Larger, more established companies may be unable to attain the high growth rates of successful, smaller companies during periods of economic expansion. The securities of small-capitalization or mid-capitalization companies may be subject to more abrupt or erratic market movements and may have lower trading volumes or more erratic trading than securities of larger, more established companies or market averages in general. In addition, such companies typically are more likely to be adversely affected than large capitalization companies by changes in earning results, business prospects, investor expectations or poor economic or market conditions.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary

market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG NXT DAILY ETF

The Tradr 2X Long NXT Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the common shares of Nextpower, Inc. (The Nasdaq Stock Market LLC ("Nasdaq"): NXT) ("NXT"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of NXT for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of NXT for that period. Longer holding periods, higher volatility of NXT and leverage increase the impact of compounding on an investor's returns. During periods of higher NXT volatility, the volatility of NXT may affect the Fund's return as much as, or more than, the return of NXT.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if NXT's performance is flat, and it is possible that the Fund will lose money even if NXT's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if NXT loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long NXT Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of NXT. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of NXT. This may include NXT stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of NXT for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on NXT and/or investing directly in the common stock of NXT. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of NXT is typically less efficient than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on NXT. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing NXT. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of NXT stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to NXT, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of NXT, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of NXT over the same period. As a result of its investment strategies, the Fund will be concentrated in the industry assigned to NXT (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to NXT). NXT is assigned to the Solar industry as of the date of this prospectus.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

NXT is a leading global provider of solar and energy technology solutions for utility-scale power plants. NXT pioneered and remains the global market leader in solar tracking systems. NXT delivers an integrated suite of structural, electrical, and digital solutions across the full lifecycle of solar power plants, from design and construction through operations and maintenance. NXT's integrated solutions are designed to streamline project execution, increase energy yield and long-term reliability, and enhance customer return on investment ("ROI"). NXT is headquartered in Fremont, California. As of July 10, 2026, NXT had a market capitalization of approximately $16.5 billion.

NXT is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by NXT pursuant to the Exchange Act can be located by reference to the SEC file number 001-41617 through the SEC's website at www.sec.gov. In addition, information regarding NXT may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding NXT from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of NXT. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding NXT is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of NXT have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning NXT could affect the value of the Fund's investments with respect to NXT and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of NXT.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if NXT has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if NXT reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and NXT. Because the Fund includes a multiplier of two times (200%) NXT, a single-trading day decline in NXT approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of the Fund, even if NXT subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in NXT, even if NXT maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of NXT for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as NXT volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) NXT volatility; (b) NXT performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — NXT volatility and NXT performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of NXT volatility and NXT performance over a one-year period. Actual volatility, NXT and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of NXT and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of NXT. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year NXT	200% One Year NXT	Volatility Rate				
Return	**Return**	**10%**	**25%**	**50%**	**75%**	**100%**
-60%	**-120%**	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	**-100%**	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	**-80%**	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	**-60%**	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	**-40%**	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	**-20%**	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	**0%**	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%

20%	**40%**	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	**60%**	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	**80%**	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	**100%**	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	**120%**	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of NXT's volatility and NXT's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if NXT's return were 20%, absent the effects of compounding. As the table shows, with NXT's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

NXT's annualized historical volatility rate for the two-year period ended December 31, 2025 was 61.3%. NXT's highest volatility rate for any one calendar year during the period was 61.3%. NXT's annualized total return performance for the two-year period ended December 31, 2025 was 35.6%. Historical NXT volatility and performance are not indications of what NXT volatility and performance will be in the future. The volatility of U.S. exchange-traded securities or instruments that reflect the value of NXT may differ from the volatility of NXT.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with NXT, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of NXT on such day.

In order to achieve a high degree of correlation with NXT, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to NXT may prevent the Fund from achieving a high degree of correlation with NXT and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by NXT's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when NXT is volatile, particularly when NXT is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with NXT, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with NXT. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to NXT. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of NXT. Any of these factors could decrease correlation between the performance of the Fund and NXT and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to NXT that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of NXT are listed on the Nasdaq and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although NXT's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in NXT's shares and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap

counterparties that are necessary to implement the Fund's investment strategy. Trading halts of NXT's shares and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of NXT's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting NXT's shares will result in a trading halt of the Fund's Shares. To the extent trading in NXT's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. NXT is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of NXT in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of NXT.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to NXT until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of NXT.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with NXT.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor

shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as AI and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to NXT (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to NXT). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Solar Industry Risk. The Fund is subject to solar industry risk due to its investment exposure to NXT. The value of stocks that comprise the energy sector and the prices of energy may decline. The alternative energy industry can be significantly affected by obsolescence of existing technology, short product lifecycles, falling prices and profits, competition from new market entrants and general economic conditions. This industry can also be significantly affected by fluctuations in energy prices and supply and demand of alternative energy fuels, energy conservation, the success of exploration projects, tax incentives, subsidies and other government regulations and policies. Companies in this industry may be adversely affected by commodity price volatility, changes in exchange rates, imposition of import controls, availability of certain inputs and materials required for production, depletion of resources, technological developments and labor relations. Recently, the price of oil has declined significantly and experienced significant volatility, which may materially impact companies operating in the solar energy sector. Shares of companies involved in the solar energy sector have historically been more volatile than shares of companies operating in more established industries.

Industrials Sector Risk. The Fund is subject to industrials sector risk due to its investment exposure to NXT. Industrial companies are affected by supply and demand both for their specific product or service and for industrial sector products and services in general. Government regulation, world events, exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies. Aerospace and defense companies, a component of the industrial sector, can be significantly affected by government spending policies because companies involved in this industry rely, to a significant extent, on U.S. and foreign government demand for their products and services. Thus, the financial condition of, and investor interest in, aerospace and defense companies are heavily influenced by governmental defense spending policies which are typically under pressure from efforts to control the U.S. (and other) government budgets. Transportation securities, another component of the industrial sector, are cyclical and have occasional sharp price movements which may result from changes in the economy, fuel prices, labor agreements and insurance costs.

Electrical Equipment Industry Risk. The Fund is subject to electrical equipment industry risk due to its investment exposure to NXT. The electrical equipment industry can be significantly affected by general economic trends, including employment, economic growth, interest rates, and changes in commodity prices. Electrical equipment companies are subject to the risks of technical obsolescence, and their profitability may be affected by government regulation and

spending, import controls and worldwide competition. Companies in these industries also can be adversely affected by liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution control. These factors may result in a material adverse impact on the Fund's portfolio securities and the performance of the Fund.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account

the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Large-Cap Company Risk. The Fund is subject to large-cap company risk due to its investment exposure to NXT. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large-capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During

these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG QTUM DAILY ETF

The Tradr 2X Long QTUM Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the Defiance Quantum ETF. (Nasdaq Stock Market ("Nasdaq"): QTUM) ("QTUM"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of QTUM for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of QTUM for that period. Longer holding periods, higher volatility of QTUM and leverage increase the impact of compounding on an investor's returns. During periods of higher QTUM volatility, the volatility of QTUM may affect the Fund's return as much as, or more than, the return of QTUM.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if QTUM's performance is flat, and it is possible that the Fund will lose money even if QTUM's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if QTUM loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long QTUM Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of QTUM. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of QTUM. This may include QTUM stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of QTUM for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on QTUM and/or investing directly in the common stock of QTUM. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of QTUM is typically less effective than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on QTUM. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing QTUM. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of QTUM stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to QTUM, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of QTUM, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of QTUM over the same period. As a result of its investment strategies, the Fund will be concentrated (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure) to the same extent that QTUM is so concentrated.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

QTUM is an actively managed exchange-traded fund ("ETF") that seeks to track the total return performance, before fees and expenses, of the BlueStar® Quantum Computing and Machine Learning Index (the "Index"), which consists of companies that derive at least 50% of their annual revenue or operating activity from the development of quantum computing and machine learning technology.

Defiance ETFs, LLC is the investment advisor to QTUM. Shares of QTUM are listed on Nasdaq. The prospectus for QTUM indicates that QTUM will concentrate its investments to approximately the same extent as its index. As of March 31, 2026, the index for QTUM was concentrated in the semiconductors industry and had significant exposure to other industries within the information technology sector, including the software industry group. As of September 30, 2026, QTUM had approximately $5.63 billion in assets under management.

QTUM is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by ASTS pursuant to the Exchange Act can be located by reference to the SEC file number 333-179562 through the SEC's website at www.sec.gov. In addition, information regarding ASTS may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding QTUM from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of QTUM. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding QTUM is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of QTUM have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning QTUM could affect the value of the Fund's investments with respect to QTUM and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of QTUM.

THE TRADR 2X LONG QTUM DAILY ETF, INVESTMENT MANAGERS SERIES TRUST II, AND AXS INVESTMENTS LLC ARE NOT AFFILIATED WITH QTUM, ETF SERIES SOLUTIONS, OR DEFIANCE ETFs LLC.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if QTUM has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if QTUM reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and QTUM. Because the Fund includes a multiplier of two times (200%) QTUM, a single-trading day decline in QTUM approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of

the Fund, even if QTUM subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in QTUM, even if QTUM maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of QTUM for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as QTUM volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) QTUM volatility; (b) QTUM performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — QTUM volatility and QTUM performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of QTUM volatility and QTUM performance over a one-year period. Actual volatility, QTUM and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of QTUM and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of QTUM. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year QTUM	200% One Year QTUM	Volatility Rate				
Return	**Return**	**10%**	**25%**	**50%**	**75%**	**100%**
-60%	**-120%**	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	**-100%**	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	**-80%**	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	**-60%**	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	**-40%**	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	**-20%**	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	**0%**	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	**20%**	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	**40%**	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	**60%**	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	**80%**	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	**100%**	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	**120%**	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of QTUM's volatility and QTUM's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if QTUM's return were 20%, absent the effects of compounding. As the table shows, with QTUM's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

QTUM's annualized historical volatility rate for the five-year period ended December 31, 2025 was 26.3%. QTUM's highest volatility rate for any one calendar year during the period was 31.6%. QTUM's annualized total return performance for the five-year period ended December 31, 2025 was 22.6%. Historical QTUM volatility and performance are not indications of what QTUM volatility and performance will be in the future. The volatility of U.S. exchange-traded securities or instruments that reflect the value of QTUM may differ from the volatility of QTUM.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with QTUM, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of QTUM on such day.

In order to achieve a high degree of correlation with QTUM, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to QTUM may prevent the Fund from achieving a high degree of correlation with QTUM and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by QTUM's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when QTUM is volatile, particularly when QTUM is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with QTUM, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with QTUM. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to QTUM. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of QTUM. Any of these factors could decrease correlation between the performance of the Fund and QTUM and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to QTUM that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of QTUM are listed on the Nasdaq and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although QTUM's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an

extended period of time in QTUM's and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund's investment strategy. Trading halts of QTUM's and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of QTUM's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting QTUM's shares will result in a trading halt of the Fund's Shares. To the extent trading in QTUM's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. QTUM is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of QTUM in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of QTUM.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to QTUM until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of QTUM.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with QTUM.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts

of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as artificial intelligence and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to QTUM (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to QTUM). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Semiconductor Industry Risk. The Fund is subject to information technology sector risk due to its investment exposure to QTUM. Competitive pressures, intense competition, aggressive pricing, technological developments, changing demand, research and development costs, availability and price of components and product obsolescence can significantly affect companies operating in the semiconductor industry. Reduced demand for end-user products, under-utilization of manufacturing capacity, and other factors could adversely impact the operating results of companies in the semiconductor industry. Semiconductor companies typically face high capital costs and may be heavily dependent on intellectual property rights. The semiconductor industry is highly cyclical, which may cause the operating results of many semiconductor companies to vary significantly. The stock prices of companies in the semiconductor industry have been and likely will continue to be extremely volatile.

Information Technology Sector Risk. The Fund is subject to information technology sector risk due to its investment exposure to QTUM. The information technology sector includes companies engaged in internet software and services, technology hardware and storage peripherals, electronic equipment instruments and components, and semiconductors and semiconductor equipment. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face rapid product obsolescence due to technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Failure to introduce new products, develop and maintain a loyal customer base, or achieve general market acceptance for their products could have a material adverse effect on a company's business. Companies in the information technology sector are heavily dependent on intellectual property and the loss of patent, copyright and trademark protections may adversely affect the profitability of these companies.

Quantum Computing Risk. The Fund is subject to quantum computing risk due to its investment exposure to QTUM. Companies engaged in the development of quantum computing or machine learning technology may be significantly impacted by rapid technological advancements, product obsolescence, intense competition, consumer demand, and government regulation. Such companies are also heavily dependent upon patent and intellectual property rights. A company's success in obtaining or protecting a patent related to quantum computing or machine learning, including the associated costs, are critical factors that may affect such company's profitability. In addition, tariffs placed on specialized components and/or raw materials used by such companies may increase costs and delay progress associated with research and development in quantum computing and machine learning.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Market Capitalization Risk. The Fund is subject to market capitalization risk due to its investment exposure to QTUM. Larger, more established companies may be unable to attain the high growth rates of successful, smaller companies during periods of economic expansion. The securities of small-capitalization or mid-capitalization companies may be subject to more abrupt or erratic market movements and may have lower trading volumes or more erratic trading than securities of larger, more established companies or market averages in general. In addition, such companies typically are more likely to be adversely affected than large capitalization companies by changes in earning results, business prospects, investor expectations or poor economic or market conditions.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments

(including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars, or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG QXO DAILY ETF

The Tradr 2X Long QXO Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the common shares of Lightwave Logic, Inc. (New York Stock Exchange ("NYSE"): QXO) ("QXO"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of QXO for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of QXO for that period. Longer holding periods, higher volatility of QXO and leverage increase the impact of compounding on an investor's returns. During periods of higher QXO volatility, the volatility of QXO may affect the Fund's return as much as, or more than, the return of QXO.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if QXO's performance is flat, and it is possible that the Fund will lose money even if QXO's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if QXO loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long QXO Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of QXO. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of QXO. This may include QXO stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of QXO for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on QXO and/or investing directly in the common stock of QXO. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of QXO is typically less effective than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on QXO. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing QXO. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of QXO stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to QXO, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of QXO, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of QXO over the same period. As a result of its investment strategies, the Fund will be concentrated in the industry assigned to QXO (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to QXO). QXO is assigned to the Building Products industry as of the date of this prospectus.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

QXO offers an extensive range of high-quality professional-grade exterior products and serves over 110,000 residential and non-residential customers. QXO operates approximately 600 branches throughout the United States and Canada and is the largest publicly traded distributor of roofing, waterproofing, and complementary building products in North America. QXO is headquartered in Greenwich, Connecticut. As of July 10, 2026, QXO had a market capitalization of approximately $15.8 billion.

QXO is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by QXO pursuant to the Exchange Act can be located by reference to the SEC file number 001-40766 through the SEC's website at www.sec.gov. In addition, information regarding QXO may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding QXO from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of QXO. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding QXO is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of QXO have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning QXO could affect the value of the Fund's investments with respect to QXO and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of QXO.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if QXO has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if QXO reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and QXO. Because the Fund includes a multiplier of two times (200%) QXO, a single-trading day decline in QXO approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of the Fund, even if QXO subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in QXO, even if QXO maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of QXO for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as QXO volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) QXO volatility; (b) QXO performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — QXO volatility and QXO performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of QXO volatility and QXO performance over a one-year period. Actual volatility, QXO and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of QXO and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of QXO. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year QXO	200% One Year QXO	Volatility Rate				
Return	**Return**	**10%**	**25%**	**50%**	**75%**	**100%**
-60%	**-120%**	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	**-100%**	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	**-80%**	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	**-60%**	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	**-40%**	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	**-20%**	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	**0%**	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	**20%**	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	**40%**	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	**60%**	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	**80%**	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	**100%**	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	**120%**	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of QXO's volatility and QXO's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if QXO's return were 20%, absent the effects of compounding. As the table shows, with QXO's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

QXO's annualized historical volatility rate for the five-year period ended December 31, 2025 was 146.9%. QXO's highest volatility rate for any one calendar year during the period was 250.9%. QXO's annualized total return performance for the five-year period ended December 31, 2025 was 2.2%. Historical QXO volatility and performance are not indications of what QXO volatility and performance will be in the future. The volatility of U.S. exchange-traded securities or instruments that reflect the value of QXO may differ from the volatility of QXO.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with QXO, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of QXO on such day.

In order to achieve a high degree of correlation with QXO, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to QXO may prevent the Fund from achieving a high degree of correlation with QXO and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by QXO's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when QXO is volatile, particularly when QXO is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with QXO, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with QXO. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to QXO. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of QXO. Any of these factors could decrease correlation between the performance of the Fund and QXO and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to QXO that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of QXO are listed on the NYSE and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although QXO's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in QXO's and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap counterparties that are

necessary to implement the Fund's investment strategy. Trading halts of QXO's and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of QXO's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting QXO's shares will result in a trading halt of the Fund's Shares. To the extent trading in QXO's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. QXO is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of QXO in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of QXO.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to QXO until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of QXO.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with QXO.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as artificial intelligence and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to QXO (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to QXO). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Building Products Industry Risk. The Fund is subject to building products industry risk due to its investment exposure to QXO. Companies in the building products industry are affected by supply and demand both for their specific product or service, overall capital spending levels, which are influenced by an individual company's profitability, and broader factors such as interest rates, commodity prices, technical obsolescence, government regulation, import controls and worldwide competition. Companies in this industry can also be adversely affected by liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution control.

Materials Sector Risk. The Fund is subject to materials sector risk due to its investment exposure to QXO. Performance of companies in the materials sector can be significantly impacted by the level and volatility of commodity prices, the exchange value of the dollar, import and export controls, increased competition, liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution controls.

Industrials Sector Risk. The Fund is subject to industrials sector risk due to its investment exposure to QXO. Industrial companies are affected by supply and demand both for their specific product or service and for industrial sector products and services in general. Government regulation, world events, exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies. Aerospace and defense companies, a component of the industrial sector, can be significantly affected by government spending policies because companies involved in this industry rely, to a significant extent, on U.S. and foreign government demand for their products and services. Thus, the financial condition of, and investor interest in, aerospace and defense companies are heavily influenced by governmental defense spending policies which are typically under pressure from efforts to control the U.S. (and other) government budgets. Transportation securities, another component of the industrial sector, are cyclical and have occasional sharp price movements which may result from changes in the economy, fuel prices, labor agreements and insurance costs.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price

of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Large-Cap Company Risk. The Fund is subject to large-cap company risk due to its investment exposure to QXO. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large-capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Shares may decrease considerably and cause the market price of Shares

to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars, or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG SANM DAILY ETF

The Tradr 2X Long SANM Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the common shares of Sanmina Corporation. (The Nasdaq Global Select Market ("Nasdaq"): SANM) ("SANM"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of SANM for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of SANM for that period. Longer holding periods, higher volatility of SANM and leverage increase the impact of compounding on an investor's returns. During periods of higher SANM volatility, the volatility of SANM may affect the Fund's return as much as, or more than, the return of SANM.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if SANM's performance is flat, and it is possible that the Fund will lose money even if SANM's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if SANM loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long SANM Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of SANM. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of SANM. This may include SANM stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of SANM for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on SANM and/or investing directly in the common stock of SANM. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of SANM is typically less effective than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on SANM. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing SANM. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of SANM stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to SANM, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of SANM, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of SANM over the same period. As a result of its investment strategies, the Fund will be concentrated in the industry assigned to SANM (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to SANM). SANM is assigned to the Electronics Components industry as of the date of this prospectus.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

SANM is a leading global provider of integrated manufacturing solutions, components, products and repair, logistics and after-market services. SANM provides these comprehensive offerings primarily to original equipment manufacturers ("OEMs") in the following industries: industrial, medical, defense and aerospace, automotive, communications networks and cloud infrastructure. SANM is headquartered in San Jose, California. As of July 10, 2026, SANM had a market capitalization of approximately $11.0 billion.

SANM is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by SANM pursuant to the Exchange Act can be located by reference to the SEC file number 000-21272 through the SEC's website at www.sec.gov. In addition, information regarding SANM may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding SANM from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of SANM. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding SANM is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of SANM have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning SANM could affect the value of the Fund's investments with respect to SANM and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of SANM.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if SANM has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if SANM reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and SANM. Because the Fund includes a multiplier of two times (200%) SANM, a single-trading day decline in SANM approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of the Fund, even if SANM subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in SANM, even if SANM maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of SANM for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as SANM volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) SANM volatility; (b) SANM performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — SANM volatility and SANM performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of SANM volatility and SANM performance over a one-year period. Actual volatility, SANM and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of SANM and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of SANM. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year SANM	200% One Year SANM	Volatility Rate				
Return	Return	10%	25%	50%	75%	100%
-60%	-120%	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	-100%	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	-80%	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	-60%	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	-40%	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	-20%	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	0%	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	20%	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	40%	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	60%	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	80%	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	100%	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	120%	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of SANM's volatility and SANM's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if SANM's return were 20%, absent the effects of compounding. As the table shows, with SANM's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

SANM's annualized historical volatility rate for the five-year period ended December 31, 2025 was 40.0%. SANM's highest volatility rate for any one calendar year during the period was 56.4%. SANM's annualized total return performance for the five-year period ended December 31, 2025 was 36.3%. Historical SANM volatility and performance are not indications of what SANM volatility and performance will be in the future. The volatility of U.S. exchange-traded securities or instruments that reflect the value of SANM may differ from the volatility of SANM.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with SANM, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of SANM on such day.

In order to achieve a high degree of correlation with SANM, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to SANM may prevent the Fund from achieving a high degree of correlation with SANM and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by SANM's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when SANM is volatile, particularly when SANM is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with SANM, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with SANM. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to SANM. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of SANM. Any of these factors could decrease correlation between the performance of the Fund and SANM and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to SANM that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of SANM are listed on the Nasdaq and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although SANM's and the Fund's Shares are listed for

trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in SANM's and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund's investment strategy. Trading halts of SANM's and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of SANM's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting SANM's shares will result in a trading halt of the Fund's Shares. To the extent trading in SANM's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. SANM is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of SANM in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of SANM.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to SANM until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of SANM.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with SANM.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as artificial intelligence and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to SANM (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to SANM). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Electronics Components Industry Risk. The Fund is subject to electronics components industry risk due to its investment exposure to SANM. Electronics components companies can be significantly affected by competitive pressures, fluctuations in demand, technological developments, rapid product obsolescence, cyclical market patterns, evolving industry standards, and reliance on global supply chains. The market for products produced by electronics components companies is characterized by intense competition, frequent innovation, short product life cycles, and sensitivity to broader economic conditions. The success of electronics components companies depends in substantial part on their ability to anticipate technological changes, manage supply chain disruptions, introduce new products on a timely basis, and meet customer specifications and quality requirements. Unexpected shifts in demand, shortages of key raw materials or subcomponents, or changes in the technologies used in end markets could have a material adverse effect on a participant's operating results. Many electronic component companies rely on a combination of patents, trade secrets, and specialized manufacturing know-how to protect their products and processes. There can be no assurance that the steps taken by electronics components companies to protect their proprietary rights will be adequate to prevent misappropriation or that competitors will not independently develop technologies or products that are substantially equivalent or superior.

Information Technology Sector Risk. The Fund is subject to information technology sector risk due to its investment exposure to SANM. The information technology sector includes companies engaged in internet software and services, technology hardware and storage peripherals, electronic equipment instruments and components, and semiconductors and semiconductor equipment. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face rapid product obsolescence due to technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Failure to introduce new

products, develop and maintain a loyal customer base, or achieve general market acceptance for their products could have a material adverse effect on a company's business. Companies in the information technology sector are heavily dependent on intellectual property and the loss of patent, copyright and trademark protections may adversely affect the profitability of these companies.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration

measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Large-Cap Company Risk. The Fund is subject to large-cap company risk due to its investment exposure to SANM. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large-capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress.

During these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars, or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG SATL DAILY ETF

The Tradr 2X Long SATL Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the common shares of Satellogic Inc. (The Nasdaq Capital Market ("Nasdaq"): SATL) ("SATL"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of SATL for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of SATL for that period. Longer holding periods, higher volatility of SATL and leverage increase the impact of compounding on an investor's returns. During periods of higher SATL volatility, the volatility of SATL may affect the Fund's return as much as, or more than, the return of SATL.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if SATL's performance is flat, and it is possible that the Fund will lose money even if SATL's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if SATL loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long SATL Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of SATL. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of SATL. This may include SATL stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of SATL for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on SATL and/or investing directly in the common stock of SATL. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of SATL is typically less effective than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on SATL. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing SATL. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of SATL stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to SATL, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of SATL, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of SATL over the same period. As a result of its investment strategies, the Fund will be concentrated in the industry assigned to SATL (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to SATL). SATL is assigned to the Aerospace and Defense industry as of the date of this prospectus.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

SATL is a vertically integrated Earth observation company that designs, manufactures, and operates satellite systems, delivering high-resolution geospatial imagery and analytics to government and commercial customers. SATL provides Earth observation data, managed space systems, and satellite ownership solutions through its end-to-end production and operations platform. SATL is headquartered in Davidson, North Carolina. As of July 10, 2026, SATL had a market capitalization of approximately $714.5 million.

SATL is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by SATL pursuant to the Exchange Act can be located by reference to the SEC file number 001-41247 through the SEC's website at www.sec.gov. In addition, information regarding SATL may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding SATL from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of SATL. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding SATL is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of SATL have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning SATL could affect the value of the Fund's investments with respect to SATL and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of SATL.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if SATL has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if SATL reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and SATL. Because the Fund includes a multiplier of two times (200%) SATL, a single-trading day decline in SATL approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of the Fund, even if SATL subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in SATL, even if SATL maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of SATL for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as SATL volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) SATL volatility; (b) SATL performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — SATL volatility and SATL performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of SATL volatility and SATL performance over a one-year period. Actual volatility, SATL and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of SATL and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of SATL. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year SATL	200% One Year SATL	Volatility Rate				
Return	**Return**	**10%**	**25%**	**50%**	**75%**	**100%**
-60%	**-120%**	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	**-100%**	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	**-80%**	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	**-60%**	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	**-40%**	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	**-20%**	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	**0%**	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	**20%**	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	**40%**	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	**60%**	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	**80%**	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	**100%**	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	**120%**	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of SATL's volatility and SATL's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if SATL's return were 20%, absent the effects of compounding. As the table shows, with SATL's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

SATL's annualized historical volatility rate for the four-year period ended December 31, 2025 was 108.0%. SATL's highest volatility rate for any one calendar year during the period was 115.0%. SATL's annualized total return performance for the four-year period ended December 31, 2025 was -33.7%. Historical SATL volatility and performance are not indications of what SATL volatility and performance will be in the future. The volatility of U.S. exchange-traded securities or instruments that reflect the value of SATL may differ from the volatility of SATL.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with SATL, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of SATL on such day.

In order to achieve a high degree of correlation with SATL, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to SATL may prevent the Fund from achieving a high degree of correlation with SATL and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by SATL's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when SATL is volatile, particularly when SATL is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with SATL, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with SATL. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to SATL. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of SATL. Any of these factors could decrease correlation between the performance of the Fund and SATL and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to SATL that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of SATL are listed on the Nasdaq and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although SATL's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in SATL's and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap counterparties that are

necessary to implement the Fund's investment strategy. Trading halts of SATL's and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of SATL's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting SATL's shares will result in a trading halt of the Fund's Shares. To the extent trading in SATL's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. SATL is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of SATL in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of SATL.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to SATL until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of SATL.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with SATL.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor

shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as artificial intelligence and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to SATL (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to SATL). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Aerospace and Defense Industry Risk. The Fund is subject to aerospace and defense industry risk due to its investment exposure to SATL. Aerospace and defense companies are subject to numerous risks, including fierce competition, consolidation, adverse political, economic and governmental developments, substantial research and development costs, cuts in government funding, product and technology obsolescence, limited numbers of potential customers and decreased demand for new equipment. In addition, companies involved in the commercial aerospace industry are also subject to aircraft order cancellations, changes in aircraft-leasing contracts, excess capacity, cutbacks in profitable business travel, fuel price hikes, labor union settlements, adverse changes in international politics and relations, intense global competition, government regulation and cyclical market patterns. Aerospace and defense companies rely heavily on U.S. Government and other government demand for their products and services. As a result, these companies could be adversely impacted by future reductions or changes in government spending. Such government spending on aerospace and defense is not generally correlated with economic cycles, but rather with general political support for this type of spending. There is no assurance that future levels of spending on aerospace and defense will increase or that such spending will not decrease in the future. Competition, labor relations and the price of fuel can impact aerospace and defense companies. In addition, deregulation of airlines has substantially decreased the U.S. Government's role in the air transport industry while promoting competition. However, the profitability of individual carriers as well as the entire industry could be impacted by the regulations and policies of various domestic and foreign governments.

Artificial Intelligence Technology Risk. The Fund is subject to artificial intelligence technology risk due to its investment exposure to SATL. AI technology is generally highly reliant on the collection and analysis of large amounts of data, and it is not possible or practicable to incorporate all relevant data into the model that such AI utilizes to operate. Certain data in such models will inevitably contain a degree of inaccuracy and error — potentially materially so — and could otherwise be inadequate or flawed which would be likely to degrade the effectiveness of the AI technology. Companies involved in, or exposed to, artificial intelligence-related businesses may have limited product lines, markets, financial resources or personnel. These companies face intense competition and potentially rapid product obsolescence, and many depend significantly on retaining and growing the consumer base of their respective products and services. Many of these companies are also reliant on the end-user demand of products and services in various industries that may in part utilize artificial intelligence. Further, many companies involved in, or exposed to, artificial intelligence-related businesses may be substantially exposed to the market and business risks of other industries or sectors.

Information Technology Sector Risk. The Fund is subject to information technology sector risk due to its investment exposure to SATL. The information technology sector includes companies engaged in internet software and services, technology hardware and storage peripherals, electronic equipment instruments and components, and semiconductors and semiconductor equipment. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face rapid product obsolescence due to technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Failure to introduce new products, develop and maintain a loyal customer base, or achieve general market acceptance for their products could have a material adverse effect on a company's business. Companies in the information technology sector are heavily dependent on intellectual property and the loss of patent, copyright and trademark protections may adversely affect the profitability of these companies.

Industrials Sector Risk. The Fund is subject to industrials sector risk due to its investment exposure to SATL. Industrial companies are affected by supply and demand both for their specific product or service and for industrial sector products and services in general. Government regulation, world events, exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies. Aerospace and defense companies, a component of the industrial sector, can be significantly affected by government spending policies because companies involved in this industry rely, to a significant extent, on U.S. and foreign government demand for their products and services. Thus, the financial condition of, and investor interest in, aerospace and defense companies are heavily influenced by governmental defense spending policies which are typically under pressure from efforts to control the U.S. (and other) government budgets. Transportation securities, another component of the industrial sector, are cyclical and have occasional sharp price movements which may result from changes in the economy, fuel prices, labor agreements and insurance costs.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Small-Cap Company Risk. The Fund is subject to small-cap company risk due to its exposure to SATL. The securities of small-capitalization companies may be subject to more abrupt or erratic market movements and may have lower trading volumes or more erratic trading than securities of larger, more established companies or market averages in general. In addition, such companies typically are more likely to be adversely affected than large capitalization companies by changes in earning results, business prospects, investor expectations or poor economic or market conditions.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An

individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars, or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG SECZ DAILY ETF

The Tradr 2X Long SECZ Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the common shares of SecuritizeCorporation (New York Stock Exchange ("NYSE"): SECZ) ("SECZ"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of SECZ for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of SECZ for that period. Longer holding periods, higher volatility of SECZ and leverage increase the impact of compounding on an investor's returns. During periods of higher SECZ volatility, the volatility of SECZ may affect the Fund's return as much as, or more than, the return of SECZ.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if SECZ's performance is flat, and it is possible that the Fund will lose money even if SECZ's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if SECZ loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long SECZ Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of SECZ. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of SECZ. This may include SECZ stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of SECZ for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on SECZ and/or investing directly in the common stock of SECZ. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of SECZ is typically less effective than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on SECZ. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing SECZ. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of SECZ stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to SECZ, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of SECZ, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of SECZ over the same period. As a result of its investment strategies, the Fund will be concentrated in the industry assigned to SECZ (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to SECZ). SECZ is assigned to the Financial Services industry as of the date of this prospectus.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

SECZ is a financial technology company that provides a platform for the issuance, administration, and trading of tokenized securities and other real-world assets through partnerships with leading asset managers. SECZ, through its subsidiaries, is an SEC-registered broker dealer, digital transfer agent, fund administrator and operator of an SEC-regulated Alternative Trading System (ATS). SECZ is headquartered in New York, New York. As of July 10, 2026, SECZ had a market capitalization of approximately $1.31 billion.

SECZ is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by SECZ pursuant to the Exchange Act can be located by reference to the SEC file number 001-43379 through the SEC's website at www.sec.gov. In addition, information regarding SECZ may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding SECZ from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of SECZ. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding SECZ is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of SECZ have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning SECZ could affect the value of the Fund's investments with respect to SECZ and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of SECZ.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if SECZ has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if SECZ reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and SECZ. Because the Fund includes a multiplier of two times (200%) SECZ, a single-trading day decline in SECZ approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of the Fund, even if SECZ subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in SECZ, even if SECZ maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of SECZ for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as SECZ volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) SECZ volatility; (b) SECZ performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — SECZ volatility and SECZ performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of SECZ volatility and SECZ performance over a one-year period. Actual volatility, SECZ and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of SECZ and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of SECZ. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year SECZ	200% One Year SECZ	Volatility Rate				
Return	**Return**	**10%**	**25%**	**50%**	**75%**	**100%**
-60%	**-120%**	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	**-100%**	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	**-80%**	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	**-60%**	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	**-40%**	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	**-20%**	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	**0%**	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	**20%**	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	**40%**	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	**60%**	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	**80%**	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	**100%**	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	**120%**	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of SECZ's volatility and SECZ's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if SECZ's return were 20%, absent the effects of compounding. As the table shows, with SECZ's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

SECZ's annualized historical volatility rate for the seven-month period ended December 31, 2025 was 72.0%. SECZ's highest volatility rate for any one calendar year during the period was 72.0%. SECZ's annualized total return performance for the seven-month period ended December 31, 2025 was 9.5%. Historical SECZ volatility and performance are not indications of what SECZ volatility and performance will be in the future. The volatility of U.S. exchange-traded securities or instruments that reflect the value of SECZ may differ from the volatility of SECZ.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with SECZ, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of SECZ on such day.

In order to achieve a high degree of correlation with SECZ, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to SECZ may prevent the Fund from achieving a high degree of correlation with SECZ and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by SECZ's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when SECZ is volatile, particularly when SECZ is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with SECZ, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with SECZ. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to SECZ. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of SECZ. Any of these factors could decrease correlation between the performance of the Fund and SECZ and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to SECZ that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of SECZ are listed on the NYSE and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although SECZ's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange

may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in SECZ's and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund's investment strategy. Trading halts of SECZ's and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of SECZ's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting SECZ's shares will result in a trading halt of the Fund's Shares. To the extent trading in SECZ's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. SECZ is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of SECZ in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of SECZ.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to SECZ until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of SECZ.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with SECZ.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as artificial intelligence and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to SECZ (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to SECZ). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Financial Services Industry Risk. The Fund is subject to financial services industry risk due to its investment exposure to SECZ. Companies in the financial services industry are subject to extensive governmental regulation, which may limit both the amounts and types of loans and other financial commitments they can make, the interest rates and fees they can charge, the scope of their activities, the prices they can charge and the amount of capital they must maintain. Profitability is largely dependent on the availability and cost of capital funds and can fluctuate significantly when interest rates change or due to increased competition. In addition, deterioration of the credit markets generally may cause an adverse impact in a broad range of markets, including U.S. and international credit and interbank money markets generally, thereby affecting a wide range of financial institutions and markets. Certain events in the financial sector may cause an unusually high degree of volatility in the financial markets, both domestic and foreign, and cause certain companies in the investment managers industry to incur large losses. Securities of companies in the investment managers industry may experience a dramatic decline in value when such companies experience substantial declines in the valuations of their assets, take action to raise capital (such as the issuance of debt or equity securities), or cease operations. Credit losses resulting from financial difficulties of borrowers and financial losses associated with investment activities can negatively impact the sector. Adverse economic, business or political developments could adversely affect financial institutions engaged in mortgage finance or other lending or investing activities directly or indirectly connected to the value of real estate.

Digital Asset Markets Risk. The Fund is subject to digital assets markets risk due to its investment exposure to SECZ. While the Fund does not invest directly in digital assets, it will have exposure to digital asset market risks due to its investment exposure to SECZ. Recent developments in the digital asset economy have led to extreme volatility and disruption in digital asset markets, a loss of confidence in participants of the digital asset ecosystem, significant negative publicity surrounding digital assets broadly and market-wide declines in liquidity. In recent years, digital asset prices

have fluctuated widely. This has led to volatility and disruption in the digital asset markets and financial difficulties for several prominent industry participants, including digital asset trading platforms, hedge funds and lending platforms, including several bankruptcies. This resulted in a loss of confidence in participants in the digital asset ecosystem and market-wide declines in digital asset trading prices and liquidity. These events have led to a substantial increase in regulatory and enforcement scrutiny of the industry as a whole and of digital asset trading platforms, including from the U.S. Department of Justice, the SEC, the CFTC, the President and Congress. These events have also led to significant negative publicity around digital asset market participants. This publicity could negatively impact the reputation of the Fund and/or the Advisor and have an adverse effect on the trading price and/or the value of the Fund's Shares. Moreover, sales of a significant number of Shares of the Fund as a result of these events could have a negative impact on the trading price of the Shares. Continued disruption and instability in the digital asset markets as these events develop, including further declines in the trading prices and liquidity of digital assets could have a material adverse effect on the value of the Shares and the Shares could lose all or substantially all of their value. These events are continuing to develop at a rapid pace and it is not possible to predict at this time all of the risks that they may pose to the Fund and the Advisor.

Financial Technology ("FinTech") Companies Risk. The Fund is subject to FinTech risk due to its investment exposure to SECZ. FinTech companies may be adversely impacted by government regulations, economic conditions, and deterioration in credit markets. These companies may have significant exposure to consumers and businesses (especially small businesses) in the form of loans and other financial products or services. FinTech companies typically face intense competition and potentially rapid product obsolescence. In addition, many FinTech companies store sensitive consumer information and could be the target of cybersecurity attacks and other types of theft, which could have a negative impact on these companies. Many FinTech companies currently operate under less regulatory scrutiny than traditional financial services companies and banks, but there is significant risk that regulatory oversight could increase in the future. Higher levels of regulation could increase costs and adversely impact the current business models of some FinTech companies. These companies could be negatively impacted by disruptions in service caused by hardware or software failure, or by interruptions or delays in service by third-party data center hosting facilities and maintenance providers. FinTech companies involved in alternative currencies may face slow adoption rates and be subject to higher levels of regulatory scrutiny in the future, which could severely impact the viability of these companies. FinTech companies with significant alternative currency exposure may also be negatively impacted during high periods of volatility within the crypto markets. FinTech companies, especially smaller companies, tend to be more volatile than companies that do not rely heavily on technology. The customers and/or suppliers of FinTech companies may be concentrated in a particular country, region, or industry. Any adverse event affecting one of these countries, regions or industries could have a negative impact on FinTech companies.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt

securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Small-Cap Company Risk. The Fund is subject to small-cap company risk due to its investment exposure to SECZ. The securities of small-capitalization companies may be subject to more abrupt or erratic market movements and may have lower trading volumes or more erratic trading than securities of larger, more established companies or market averages in general. In addition, such companies typically are more likely to be adversely affected than large capitalization companies by changes in earning results, business prospects, investor expectations or poor economic or market conditions.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars, or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

IMPORTANT INFORMATION ABOUT THE TRADR 2X LONG VISN DAILY ETF

The Tradr 2X Long VISN Daily ETF (the "Fund") seeks daily leveraged investment results and is very different from most other exchange-traded funds ("ETFs"). As a result, the Fund may be riskier than alternatives that do not use leverage because the Fund's objective is to magnify (200%) the daily performance of the common shares of Vistance Networks, Inc. (formerly, CommScope Holding Company, Inc.) (The Nasdaq Global Select Market ("Nasdaq"): VISN) ("VISN"). The return for investors that invest for periods longer or shorter than a single-trading day should not be expected to be 200% of the performance of VISN for the period. The return of the Fund for a period longer than a single-trading day will be the result of each trading day's compounded return over the period, which will very likely differ from 200% of the return of VISN for that period. Longer holding periods, higher volatility of VISN and leverage increase the impact of compounding on an investor's returns. During periods of higher VISN volatility, the volatility of VISN may affect the Fund's return as much as, or more than, the return of VISN.

The Fund is not suitable for all investors. The Fund is designed to be utilized only by knowledgeable investors who understand the potential consequences of seeking daily leveraged (200%) investment results, understand the risks associated with the use of leverage and are willing to monitor their portfolios frequently. The Fund is not intended to be used by, and is not appropriate for, investors who do not intend to actively monitor and manage their portfolios. For periods longer than a single-trading day, the Fund will lose money if VISN's performance is flat, and it is possible that the Fund will lose money even if VISN's performance increases over a period longer than a single-trading day. An investor could lose the full principal value of his/her investment within a single-trading day if VISN loses more than 50% in one day.

INVESTMENT OBJECTIVE

The Tradr 2X Long VISN Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of VISN. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

FEES AND EXPENSES OF THE FUND

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund ("Shares"). **Investors may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example set forth below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	1.49%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses[(1)]	0.00%
Total Annual Fund Operating Expenses	1.49%

(1) "Other Expenses" are estimated for the current fiscal year. The cost of investing in swaps, including the embedded cost of the swap and the operating expenses of the referenced assets, is an indirect expense that is not included in the above fee table and is not reflected in the expense example.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares.

Although your actual costs may be higher or lower, your costs, based on these assumptions would be:

One Year	Three Years
$152	$471

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or "turns over" its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. As of the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

Under normal market circumstances, the Fund will maintain at least 80% exposure to financial instruments that provide two times leveraged exposure to the daily performance of VISN. This may include VISN stock in addition to financial instruments discussed below. The Fund is an actively-managed ETF that seeks to achieve on a daily basis, before fees and expenses, 200% performance of VISN for a single-trading day, not for any other period, by entering into one or more swaps and/or purchasing listed options on VISN and/or investing directly in the common stock of VISN. A "single-trading day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. However, the use of option contracts or direct investments in common stock of VISN is typically less effective than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

The Fund will enter into one or more swaps with major global financial institutions whereby the Fund and the global financial institution will agree to exchange the return (or differentials in rates of return) earned or realized on VISN. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing VISN. If the Advisor determines to use call options, the Fund will purchase exchange-traded call options, including FLexible EXchange® Options ("FLEX Options"). FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter ("OTC") options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the Options Clearing Corporation ("OCC"), a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. The Fund may take delivery of VISN stock if it chooses to exercise a call option and either hold or sell the stock in the secondary markets.

Additionally, the Fund may use other option strategies to produce similar exposure to VISN, like buying calls and selling puts with identical strike prices. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. In situations where swap availability is constrained, the Fund may rely more heavily on options contracts. Additionally, the Fund may use options in response to changing market dynamics.

The Advisor attempts to consistently apply leverage to increase the Fund's exposure to 200% of VISN, and expects to rebalance the Fund's holdings daily to maintain such exposure. Because of daily rebalancing and the compounding of each day's return over time, the return of the Fund for periods longer than a single-trading day will be the result of each day's returns compounded over the period, which will very likely differ from 200% of the return of VISN over the same period. As a result of its investment strategies, the Fund will be concentrated in the industry assigned to VISN (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to VISN). VISN is assigned to the Communications Equipment industry as of the date of this prospectus.

Additionally, the Fund may invest all available cash in the Fund's portfolio in (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) short-term bond ETFs and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality ("Collateral Investments").

The Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. The Fund may engage in frequent and active trading.

VISN is a global provider of infrastructure solutions that enable service providers, including cable, telephone and digital broadcast satellite operators and media programmers, to deliver media, voice, Internet Protocol (IP) data services and Wi-Fi to their subscribers and provide enterprises with constant wireless and wired connectivity across complex and varied networking environments. VISN's solutions are complemented by technical support, systems design, and integration services and include digital video, IP television ("IPTV"), broadband access infrastructure, and enterprise networking solutions. VISN is headquartered in Richardson, Texas. As of July 10, 2026, VISN had a market capitalization of approximately $2.81 billion.

VISN is registered under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Information provided to or filed with the SEC by VISN pursuant to the Exchange Act can be located by reference to the SEC file number 001-36146 through the SEC's website at www.sec.gov. In addition, information regarding VISN may be obtained from other sources including, but not limited to, press releases, newspaper articles and other publicly disseminated documents.

The Fund has derived all disclosures contained in this document regarding VISN from the publicly available documents described above. In connection with the offering of the Fund's securities, none of the Fund, the Trust, the Advisor or any of their respective affiliates has participated in the preparation of such documents. The Advisor has not made any due diligence inquiry with respect to the data or information underlying the publicly available information of VISN. None of the Fund, the Trust, the Advisor or any of their respective affiliates makes any representation that such publicly available documents or any other publicly available information regarding VISN is accurate or complete. Furthermore, the Fund cannot give any assurance that all events occurring prior to the date hereof (including events that would affect the accuracy or completeness of the publicly available documents described above) that would affect the trading price of VISN have been publicly disclosed. Subsequent disclosure of any such events or the disclosure of or failure to disclose material future events concerning VISN could affect the value of the Fund's investments with respect to VISN and therefore the value of the Fund.

None of the Trust, the Fund, the Advisor or any of their respective affiliates makes any representation to you as to the performance of VISN.

PRINCIPAL RISKS

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk.* The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if VISN has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if VISN reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk.* Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Fund, and may magnify any differences between the performance of the Fund and VISN. Because the Fund includes a multiplier of two times (200%) VISN, a single-trading day decline in VISN approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of the Fund, even if VISN subsequently rises or moves in an opposite direction, eliminating all or a portion of the earlier decline. This would be the case with any such single-trading day movements in VISN, even if VISN maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Fund's investments in swaps and therefore the value of an investment in the Fund could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Fund and the possibility that you could lose your entire investment in the Fund, you should not invest in the Fund.

Compounding Risk. The Fund has a single-trading day investment objective, and the Fund's performance for any other period is the result of its return for each day compounded over the period. The performance of the Fund for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from 200% of the daily return of VISN for the same period, before accounting for fees and expenses. **Compounding affects all investments, but has a more significant impact on a leveraged fund. This effect becomes more pronounced as VISN volatility and holding periods increase.** Fund performance for a period longer than a single-trading day can be estimated given any set of assumptions for the following factors: (a) VISN volatility; (b) VISN performance; (c) period of time; (d) financing rates associated with leveraged exposure; and (e) other Fund expenses. The chart below illustrates the impact of two principal factors — VISN volatility and VISN performance — on Fund performance. The chart shows estimated Fund returns for a number of combinations of VISN volatility and VISN performance over a one-year period. Actual volatility, VISN and Fund performance may differ significantly from the chart below. Performance shown in the chart assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Fund's performance would be lower than shown.

Areas shaded red represent those scenarios where the Fund can be expected to return less than 200% of the performance of VISN and those shaded green represent those scenarios where the Fund can be expected to return more than 200% of the performance of VISN. The Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated Fund Returns

One Year VISN	200% One Year VISN	Volatility Rate				
Return	**Return**	**10%**	**25%**	**50%**	**75%**	**100%**
-60%	**-120%**	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	**-100%**	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	**-80%**	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	**-60%**	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	**-40%**	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	**-20%**	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	**0%**	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	**20%**	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	**40%**	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	**60%**	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	**80%**	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	**100%**	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	**120%**	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of VISN's volatility and VISN's performance on the return of the Fund and is not a representation of actual returns. For example, the Fund may incorrectly be expected to achieve a 40% return on a yearly basis if VISN's return were 20%, absent the effects of compounding. As the table shows, with VISN's volatility of 50%, the Fund could be expected to return 12.1% under such a scenario. The Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Principal Risks — Correlation Risk" below.

VISN's annualized historical volatility rate for the five-year period ended December 31, 2025 was 89.7%. VISN's highest volatility rate for any one calendar year during the period was 114.1%. VISN's annualized total return performance for the five-year period ended December 31, 2025 was 6.2%. Historical VISN volatility and performance are not indications of what VISN volatility and performance will be in the future. The volatility of U.S. exchange-traded securities or instruments that reflect the value of VISN may differ from the volatility of VISN.

Correlation Risk. A number of factors may affect the Fund's ability to achieve a high degree of correlation with VISN, and there is no guarantee that the Fund will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from 200% of the percentage change of VISN on such day.

In order to achieve a high degree of correlation with VISN, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to VISN may prevent the Fund from achieving a high degree of correlation with VISN and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by VISN's movements, including intraday movements. **Because of this, it is unlikely that the Fund will have perfect 200% exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when VISN is volatile, particularly when VISN is volatile at or near the close of the trading day.**

A number of other factors may also adversely affect the Fund's correlation with UMC, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which the Fund invests. The Fund may take, or refrain from taking, positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Fund's correlation with UMC. The Fund may also be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being under- or overexposed to UMC. Additionally, the Fund's underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Fund, which may cause a difference between the changes in the daily performance of the Fund and changes in the performance of UMC. Any of these factors could decrease correlation between the performance of the Fund and UMC and may hinder the Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason the Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, the Fund may have investment exposure to VISN that is significantly greater or less than its stated multiple. As a result, the Fund may be more exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Shares of VISN are listed on the Nasdaq and Shares of the Fund are listed on the Exchange. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although VISN's and the Fund's Shares are listed for trading on exchanges, there can be no assurance that an active trading market for such shares will be available at all times and an exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in VISN's and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap counterparties that are

necessary to implement the Fund's investment strategy. Trading halts of VISN's and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily mean that other exchanges will halt a security from trading. Regulatory trading halts of VISN's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting VISN's shares will result in a trading halt of the Fund's Shares. To the extent trading in VISN's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives and repurchase agreements entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in the Fund may decline.

Indirect Investment Risk. VISN is not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of VISN in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of VISN.

Intraday Price Performance Risk. The intraday performance of Shares traded in the secondary market generally will be different from the performance of the Fund when measured from one NAV calculation-time to the next. When shares are bought intraday, the performance of the Shares relative to VISN until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of VISN.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Fund invests, the Fund might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Fund invests may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent the Fund from limiting losses, realizing gains or achieving a high leveraged correlation with VISN.

Portfolio Turnover Risk. The Fund may incur high portfolio turnover to manage the Fund's investment exposure. Additionally, active market trading of the Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Fund.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor

shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as artificial intelligence and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Fund may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Fund could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Fund would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Fund at that time. The Fund's ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. The Fund will be concentrated in the industry assigned to VISN (i.e., hold more than 25% of its total assets in investments that provide leveraged exposure to the industry assigned to VISN). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Communications Equipment Industry Risk. The Fund is subject to communications equipment industry risk due to its exposure to VISN. Failure to obtain, or delays in obtaining, financing or regulatory approval, intense competition, product compatibility, consumer preferences, corporate capital expenditures, and rapid obsolescence can significantly affect the communications equipment industry. Communications services companies are subject to extensive government regulation. The costs of complying with governmental regulations, delays or failure to receive required regulatory approvals, or the enactment of new adverse regulatory requirements may adversely affect the business of such companies. These companies can also be significantly affected by competition with alternative technologies, product compatibility, consumer preferences, rapid product obsolescence, and research and development of new products. Technological innovations may make the products and services of such companies obsolete.

Information Technology Sector Risk. The Fund is subject to information technology sector risk due to its investment exposure to VISN. The information technology sector includes companies engaged in internet software and services, technology hardware and storage peripherals, electronic equipment instruments and components, and semiconductors and semiconductor equipment. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face rapid product obsolescence due to technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Failure to introduce new products, develop and maintain a loyal customer base, or achieve general market acceptance for their products could have a material adverse effect on a company's business. Companies in the information technology sector are heavily dependent on intellectual property and the loss of patent, copyright and trademark protections may adversely affect the profitability of these companies.

Collateral Investments Risk. The Fund's use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality

issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause the Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price. Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Fund's Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by the Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Fund is subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Fund would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Fund's income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Fund's portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Fund may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Mid-Cap Company Risk. The Fund is subject to mid-cap company risk due to its exposure to VISN. Investing in mid-capitalization companies generally involves greater risks than investing in large-capitalization companies. Mid-cap companies may have limited product lines, markets or financial resources or may depend on the expertise of a few people and may be subject to more abrupt or erratic market movements than securities of larger, more established companies or market averages in general.

ETF Structure Risks. The Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an authorized participant ("AP") may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as APs on an agency basis (i.e., on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent the Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for Shares based on trading volume and market liquidity, and the spread is generally lower if Shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in the Fund, asset swings in the Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling Shares, including bid-ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Shares may decrease considerably and cause the market price of Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Fund at NAV if they are tendered in large blocks of shares called "Creation Units." Only APs may engage in such creation and redemption transactions directly with the Fund. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. Initially, due to the small asset size of the Fund, it may have difficulty maintaining its listings on the Exchange.

Active Management Risk. The Fund is actively-managed and its performance reflects investment decisions that the Advisor makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Fund has no operating history and currently has fewer assets than larger funds.

Non-Diversification Risk. The Fund is classified as "non-diversified" under the 1940 Act. As a result, the Fund is only limited as to the percentage of its assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Internal Revenue Code of 1986, as amended (the "Code"). The Fund seeks to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Fund may invest a relatively high percentage of its assets in swaps with a single counterparty or a few counterparties. As a result, the Fund may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Fund must satisfy certain diversification and other requirements. In particular, the Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments

(including swaps and options) that may be entered into by the Fund is unclear. In addition, the application of these requirements to the Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If the Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Fund to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars, or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Damage to energy infrastructure from conflicts in the Middle East, reduced shipping through the Strait of Hormuz, and other energy supply constraints could also have long-term adverse impacts on the U.S. and world economies. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder's ability to exchange or redeem Shares may be affected. The use of artificial intelligence and machine learning could exacerbate these risks. Issuers of securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.tradretfs.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT

Investment Advisor

AXS Investments LLC ("AXS" or the "Advisor") is the Fund's investment advisor.

Portfolio Managers

Travis Trampe, Managing Director, Portfolio Manager of the Advisor, and Parker Binion, Chief of Compliance and Head of Investments of the Advisor, are jointly and primarily responsible for the day-to-day management of the Fund. Messrs. Trampe and Binion have been Portfolio Managers of the Fund since 2026.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis, at NAV, only in Creation Units. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be purchased and sold on the secondary market through a broker-dealer. Since Shares trade on securities exchanges in the secondary market at their market price rather than their NAV, the Shares may trade at a price greater than (premium) or less than (discount) the Fund's NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling Shares in the secondary market (the "bid-ask spread"). Recent information, including the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.tradretfs.com.

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Advisor and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Each of Tradr 2X Long FCEL Daily ETF, Tradr 2X Long FIX Daily ETF, Tradr 2X Long FRVO Daily ETF, Tradr 2X Long IQMX Daily ETF, Tradr 2X Long NASA Daily ETF, Tradr 2X Long NXT Daily ETF, Tradr 2X Long QTUM Daily ETF, Tradr 2X Long QXO Daily ETF, Tradr 2X Long SANM Daily ETF, Tradr 2X Long SATL Daily ETF, Tradr 2X Long SECZ Daily ETF, and Tradr 2X Long VISN Daily ETF (each individually, a "Fund") is a series of Investment Managers Series Trust II (the "Trust") and each is regulated as an "investment company" under the 1940 Act. The Funds' investment objectives are non-fundamental and may be changed without approval by the holders of a majority of the outstanding voting securities of the respective Fund. Unless an investment policy is identified as being fundamental, all investment policies included in this prospectus and the Statement of Additional Information ("SAI") for the Funds are non-fundamental and may be changed by the Board of Trustees of the Trust (the "Board") without shareholder approval. If there is a material change to a Fund's investment objective or principal investment strategies, you should consider whether the Fund remains an appropriate investment for you. There is no guarantee that the Funds will achieve their investment objective.

DISCLOSURE OF PORTFOLIO HOLDINGS

A description of the Trust's policies and procedures with respect to the disclosure of the Funds' portfolio holdings is available in the SAI for the Funds, which is available at www.tradretfs.com.

ADDITIONAL INFORMATION REGARDING THE FUNDS' INVESTMENT OBJECTIVES

The Tradr 2X Long FCEL Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of FCEL. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long FIX Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of FIX. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long FRVO Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of FRVO. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long IQMX Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of IQMX. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long NASA Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of NASA. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long NXT Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of NXT. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long QTUM Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of QTUM. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long QXO Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of QXO. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long SANM Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of SANM. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long SATL Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of SATL. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long SECZ Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of SECZ. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

The Tradr 2X Long VISN Daily ETF seeks daily investment results, before fees and expenses, that correspond to two times (200%) the daily performance of the common shares of VISN. **The Fund does not seek to achieve its stated investment objective for a period of time different than a single-trading day.**

Each Fund's investment objective is non-fundamental, meaning that it may be changed by the Board of Trustees (the "Board") of the Trust, without the approval of the Fund's shareholders. Each Fund reserves the right to substitute a different index or security for its underlying security on which the performance of the Fund is based.

The Funds are not suitable for all investors. The Funds are designed to be utilized only by sophisticated investors, such as traders and active investors employing dynamic strategies. Such investors are expected to monitor and manage their portfolios frequently. Investors in the Funds should: (a) understand the risks associated with the use of leverage; (b) understand the consequences of seeking daily leveraged investment results; and (c) intend to actively monitor and manage their investments. Investors who do not understand the Funds or do not intend to actively manage their funds and monitor their investments should not buy the Funds.

There is no assurance that the Funds will achieve their respective investment objectives and an investment in the Funds could lose money.

Additional Information Regarding the Funds' Principal Strategies

In seeking to achieve each Fund's investment objective, the Advisor invests in a manner that is designed to correspond to the respective multiple of the daily performance of such Fund's underlying security. Each Fund attempts to achieve its investment objective by investing a substantial amount of its assets in financial instruments that provide exposure to its underlying security.

The Advisor does not invest the assets of the Funds in securities or financial instruments based on the Advisor's view of the investment merit of a particular security, instrument, or company, other than for cash management purposes, nor does it conduct conventional investment research or analysis (other than in determining counterparty creditworthiness), or forecast market movement or trends, in managing the assets of the Funds. Each Fund generally seeks to remain fully invested at all times in securities and/or financial instruments that, in combination, provide exposure to its underlying security consistent with its investment objective, without regard to market conditions, trends, direction, or the financial condition of a particular issuer.

On a daily basis, each Fund will seek to position its portfolio so that the Fund's investment exposure is consistent with its investment objective. In general, changes to the level of an underlying security each day will determine whether a Fund's portfolio needs to be repositioned. For example, if an underlying security has risen on a given day, net assets of a Fund should rise. As a result, a Fund's exposure will need to be increased. Conversely, if an underlying security has fallen on a given day, net assets of a Fund should fall. As a result, a Fund's exposure will need to be decreased.

The time and manner in which a Fund rebalances its portfolio may vary from day to day at the sole discretion of the Advisor depending upon market conditions and other circumstances. If for any reason a Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, a Fund may have investment exposure to its underlying security that is significantly greater or less than its stated multiple. As a result, a Fund may be more or less exposed to leverage risk than if it had been properly rebalanced and may not achieve its investment objective.

There can be no assurance that a Fund will achieve its investment objective or avoid substantial losses. The Funds do not seek to achieve their stated investment objectives over a period of time greater than a single-trading day because mathematical compounding prevents the Funds from achieving such results. Results for a Fund over periods of time greater than a single-trading day should not be expected to be a simple return times the respective multiple of its underlying security. A Fund's returns will likely differ in amount and possibly even direction from the return of the underlying security times the applicable multiple over the same period. These differences can be significant. A Fund will lose money if the underlying security's performance is flat over time, and a Fund can lose money regardless of the performance of its underlying security, as a result of daily rebalancing, fees, the underlying security's volatility, compounding and other factors. Daily compounding of a Fund's investment returns can dramatically and adversely affect its longer-term performance, especially during periods of high volatility. Volatility has a negative impact on a Fund's performance and may be at least as important to a Fund's return for a period as the return of its underlying security.

In seeking to achieve the Funds' investment objectives, the Advisor uses a mathematical approach to investing. Using this approach, the Advisor determines the type, quantity and mix of investment positions that the Advisor believes, in combination, should produce daily returns consistent with each Fund's objective.

Each Fund intends to meet its investment objective by investing a significant portion of its assets in swaps and/or purchasing listed options on investment vehicles with exposure to its underlying security, in any one of, or combinations of financial instruments, and/or direct investments in the underlying security, such that the Fund has exposure equal to its respective multiple to its underlying security at the time of its NAV calculation. The number of financial instruments a Fund invests in will change day-to-day. However, the use of option contracts or direct investments in common stock of the underlying security is typically less efficient than swaps and may increase the likelihood that the Fund is unable to achieve its daily 2X objective.

Each Fund will enter into swaps with major global financial institutions whereby the respective Fund and the global financial institution will agree to exchange the return earned or realized on the underlying security. The gross returns to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount representing the underlying security. Each trading day the Advisor adjusts each Fund's exposure to its underlying security consistent with the Fund's daily inverse investment objective. The impact of market movements during the day determines whether the portfolio needs to be repositioned. If the value of the underlying security has risen on a given day, the value of the Fund's net assets should rise, meaning its exposure will typically need to be increased. Conversely, if the value of the underlying security has fallen on a given day, the value of the Fund's net assets should fall, meaning its exposure will typically need to be reduced.

The time and manner in which a Fund rebalances its portfolio may vary from day to day at the sole discretion of the Advisor depending upon market conditions and other circumstances. Generally, at or near the close of the market at each trading day, each Fund will position its portfolio to ensure that the Fund's exposure to its underlying security is consistent with its stated investment objective. Each Fund reviews its notional exposure under each of its swaps, which reflects the extent of the Fund's total investment exposure under the swap, to ensure that the Fund's exposure is in-line with its stated investment objective. The gross returns to be exchanged are calculated with respect to the notional amount and the underlying security returns to which the swap is linked. Swaps are typically closed out on a net basis. Thus, while the notional amount reflects a Fund's total investment exposure under the swap, the net amount is the Fund's current obligations (or rights) under the swap. That is the amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement. If for any reason a Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Fund's investment exposure may not be consistent with the Fund's investment objective. As a result, a Fund may be more or less exposed to leverage

risk than if it had been properly rebalanced and may not achieve its investment objective. To the extent that a Fund needs to "roll" its swap positions (i.e., enter into new swap positions with a later expiration date as the current positions approach expiration), it could be subjected to increased costs, which could negatively impact the Fund's performance.

As a result of the above investment strategies, each Fund will be concentrated in the industry assigned to its underlying security (i.e., hold 25% or more of its total assets in investments that provide leveraged exposure to the industry assigned to the underlying security).

In addition to the investment financial instruments, each Fund will invest its remaining assets directly in Collateral Investments. The Collateral Investments may consist of high-quality securities, which include: (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; and/or (3) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or determined by the Advisor to be of comparable quality. For these purposes, "investment grade" is defined as investments with a rating at the time of purchase in one of the four highest categories of at least one nationally recognized statistical rating organizations (e.g., BBB- or higher from S&P Global Ratings or Baa3 or higher from Moody's Investors Service, Inc.).

Each Fund seeks to remain fully invested at all times in financial instruments and Collateral Investments that, in combination, provide exposure to its underlying security consistent with its investment objective without regard to market conditions, trends or direction.

Each Fund seeks to position its portfolio so that its exposure to its underlying security is consistent with its investment objective. The time and manner in which a Fund rebalances its portfolio may vary from day to day depending upon market conditions and other circumstances at the discretion of the Advisor. The impact of an underlying security's movements each day will affect whether a Fund's portfolio needs to be rebalanced and the amount of such rebalance.

The amount of exposure a Fund has to a specific combination of financial instruments may differ and may be changed without shareholder approval at any given time. The amount of a Fund's exposure should be expected to change from time to time at the discretion of the Advisor based on market conditions and other factors. In addition, the Advisor has the power to change a Fund's investment objective, benchmark, or investment strategy at any time, without shareholder approval, subject to applicable regulatory requirements.

Each Fund is classified as "non-diversified" under the Investment Company Act of 1940 (the "1940 Act"), which means that it may invest more of its assets in a smaller number of issuers than "diversified" funds. Each Fund may engage in frequent and active trading.

Fund Investments

Principal Investments

Swaps

The Funds will enter into swaps to pursue their investment objectives. The swaps may include as a reference asset investment vehicles that seek exposure to the applicable underlying security.

Swaps are contracts entered into primarily with major financial institutions for a specified period. In a standard "swap" transaction, two parties agree to exchange the return (or differentials in rates of return) earned or realized on particular predetermined investments or instruments. The gross return to be exchanged or "swapped" between the parties is calculated with respect to a "notional amount," e.g., the return on or change in value of a particular dollar amount invested in a "basket" of securities or an ETF representing a particular index. The Funds may use a combination of swaps on the underlying securities and swaps on various investment vehicles that are designed to track the performance of the underlying securities. The underlying investment vehicle may not track the performance of an underlying security due to embedded costs and other factors, which may increase a Fund's correlation risk and impact a Fund's ability to correlate with its underlying security.

With respect to the use of swaps, if an underlying security has a dramatic intraday move that causes a material decline in net assets, the terms of a swap between a Fund and its counterparties may permit the counterparties to immediately close out the transaction with the Fund. In that event, a Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with its investment objective. This, in turn, may prevent a Fund from achieving its investment objective, even if the reference asset reverses all or a portion of its intraday move by the end of the day. Any costs associated with using swaps may also have the effect of lowering a Fund's return.

Option Contracts

The Funds may purchase exchange-traded call options, including FLEX Options to pursue their investment objectives. Call options give the holder (i.e., the buyer) the right to buy an asset (or receive cash value of the asset, in case of certain call options) and the seller (i.e., the writer) the obligation to sell the asset (or deliver cash value of the asset, in case of certain call options) at a certain defined price. FLEX Options are customized options contracts that trade on an exchange but provide investors with the ability to customize key contract terms like strike price, style and expiration date while achieving price discovery in competitive, transparent auctions markets and avoiding the counterparty exposure of over-the-counter (OTC) options positions. Like traditional exchange-traded options, FLEX Options are guaranteed for settlement by the OCC, a market clearinghouse that guarantees performance by counterparties to certain derivatives contracts. The FLEX Options are listed on the Exchange. Additionally, a Fund may use other option strategies to produce similar exposure to the underlying issuer, like buying calls and selling puts with identical strike prices.

Non-Principal Investments

Cash Equivalents and Short-Term Investments

The Funds may invest in securities with maturities of less than one year or cash equivalents, or they may hold cash. The percentage of the Funds invested in such holdings varies and depends on several factors, including market conditions. For more information on eligible short-term investments, see the SAI.

U.S. Government Securities

The Funds may invest in short-term U.S. government securities. U.S. government securities include U.S. Treasury obligations and securities issued or guaranteed by various agencies of the U.S. government, or by various instrumentalities that have been established or sponsored by the U.S. government. U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. government. Securities issued or guaranteed by federal agencies and U.S. government sponsored instrumentalities may or may not be backed by the full faith and credit of the U.S. government.

Additional Information Regarding Investment Techniques and Policies

The Effects of Fees and Expenses on the Return of a Fund for a Single-Trading Day. To create the necessary exposure, a Fund uses leveraged investment techniques, which necessarily incur brokerage and financing charges. In light of these charges and a Fund's operating expenses, the expected return of a Fund over one trading day is equal to the gross expected return, which is the daily return of the underlying security multiplied by the Fund's daily leveraged investment objective, minus (i) financing charges incurred by the portfolio and (ii) daily operating expenses. For instance, if a hypothetical underlying security returns 2% on a given day, the gross expected return of a Fund would be 4%, but the net expected return, which factors in the cost of financing the portfolio and the impact of operating expenses, would be lower. A Fund will reposition its portfolio at the end of every trading day. Therefore, if an investor purchases a Fund's Shares at close of the markets on a given trading day, the investor's exposure to the hypothetical underlying security would reflect 200% of the performance of the hypothetical underlying security during the following trading day, subject to the charges and expenses noted above.

A Cautionary Note to Investors Regarding Dramatic Movement. The Advisor will not attempt to position each Fund's portfolio to ensure that the Fund does not gain or lose more than maximum percentage of its NAV on a given day. A Fund could lose an amount greater than its net assets in the event of a movement of an underlying security in excess of 50% for the Fund, in a direction adverse to the Fund (meaning a decline in the value of the underlying security for a Fund). **As a result, the risk of total loss exists.**

If an underlying security has a dramatic adverse move that causes a material decline in a Fund's net assets, the terms of a Fund's swaps may permit the counterparty to immediately close out the swap transaction. In that event, a Fund may be unable to enter into another swap or invest in other derivatives to achieve exposure consistent with a Fund's investment objective. This may prevent a Fund from achieving its leveraged investment objective, even if its underlying security later reverses all or a portion of the move, and result in significant losses.

Examples of the Impact of Daily Leverage and Compounding. Because each Fund's exposure to its underlying security is repositioned on a daily basis, for a holding period longer than one day, the pursuit of a daily investment objective will result in daily long leveraged compounding for the Funds. This means that the return of an underlying security over a period of time greater than one day multiplied by a Fund's daily long leveraged investment objective generally will not equal a Fund's performance over that same period. As a consequence, investors should not plan to hold the Funds unmonitored for periods longer or shorter than a single-trading day. This deviation increases with higher volatility in an underlying security and longer holding periods. Further, the return for investors that invest for periods less than a full trading day or for a period different than a trading day will not be the product of the return of a Fund's stated daily investment objective and the performance of its underlying security for the full trading day. The actual exposure will largely be a function of the performance of the underlying security from the end of the prior trading day.

Consider the following examples of a hypothetical fund that seeks 200% of the daily performance of a hypothetical underlying security:

Mary is considering investments in two Funds, Funds A and B. Fund A is an ETF which seeks (before fees and expenses) to match the performance of the hypothetical underlying security. Fund B is a leveraged ETF and seeks daily leveraged investment results (before fees and expenses) that correspond to 200% of the daily performance of the hypothetical underlying security.

On Day 1, the hypothetical underlying security increases in value from $100 to $105, a gain of 5%. On Day 2, the hypothetical underlying security declines from $105 back to $100, a loss of 4.76%. In the aggregate, the hypothetical underlying security has not moved.

An investment in Fund A would be expected to gain 5% on Day 1 and lose 4.76% on Day 2, returning the investment its original value. The following example assumes a $100 investment in Fund A when the hypothetical underlying security is also valued at $100:

Day	Underlying Security Value	Underlying Security Performance	Value of Fund A Investment
	$100.00		$100.00
1	$105.00	5.00%	$105.00
2	$100.00	-4.76%	$100.00

The same $100 investment in Fund B would be expected to gain 10% on Day 1 (200% of 5%) but decline 9.52% on Day 2. Although the percentage decline in Fund B is smaller on Day 2 than the percentage gain on Day 1, the loss is applied to a higher principal amount, so the investment in Fund B experiences a loss even when the aggregate underlying security value for the two-day period has not declined (these calculations do not include the charges for fund fees and expenses).

Day	Underlying Security Performance	200% of Underlying Security Performance	Value of Fund B Investment
			$100
1	5.00%	10.0%	$110
2	-4.76%	-9.52%	$99.52

As you can see, an investment in Fund B has additional risks due to the effects of leverage and compounding.

An investor who purchases shares of a Fund intra-day will generally receive more, or less, than the applicable exposure to the underlying security from that point until the end of the trading day. The actual exposure will be largely a function of the performance of the underlying security from the end of the prior trading day. If a Fund's Shares are held for a period longer than a single-trading day, the Fund's performance is likely to deviate from the respective multiple return of the underlying security's performance for the longer period. This deviation will increase with higher underlying security volatility and longer holding periods.

Examples of the Impact of Volatility. Each Fund rebalances its portfolio on a daily basis, increasing exposure in response to that day's gains or reducing exposure in response to that day's losses. Daily rebalancing will typically cause a Fund to lose money if the underlying security experiences volatility. A volatility rate is a statistical measure of the magnitude of fluctuations in the underlying security's returns over a defined period. For periods longer than a trading day, volatility in the performance of the underlying security from day to day is the primary cause of any disparity between a Fund's actual returns and the returns of the underlying security for such period. Volatility causes such disparity because it exacerbates the effects of compounding on a Fund's returns. In addition, the effects of volatility are magnified in the Funds due to leverage. Consider the following three examples that demonstrate the effect of volatility on a hypothetical fund:

Example 1 — Underlying Security Experiences Low Volatility

Mary invests $10.00 in a hypothetical 2X Fund at the close of trading on Day 1. During Day 2, the hypothetical underlying security rises from 100 to 102, a 2% gain. Mary's investment rises 4% to $10.40. Mary holds her investment through the close of trading on Day 3, during which the hypothetical underlying security rises from 102 to 104, a gain of 1.96%. Mary's investment rises to $10.81, a gain during Day 3 of 3.92%. For the two-day period since Mary invested in the hypothetical 2X Fund, the hypothetical underlying security gained 4% although Mary's investment increased by 8.1%. Because the hypothetical underlying security continued to trend upwards with low volatility, Mary's return closely correlates to the 200% return of the return of the hypothetical underlying security for the period.

Example 2 — Underlying Security Experiences High Volatility

Mary invests $10.00 in a hypothetical 2X Fund after the close of trading on Day 1. During Day 2, the hypothetical underlying security rises from 100 to 102, a 2% gain, and Mary's investment rises 4% to $10.40. Mary continues to hold her investment through the end of Day 3, during which the hypothetical underlying security declines from 102 to 98, a loss of 3.92%. Mary's investment declines by 7.84%, from $10.40 to $9.58. For the two-day period since Mary invested in the hypothetical 2X Fund, the hypothetical underlying security lost 2% while Mary's investment decreased from $10 to $9.58, a 4.2% loss. The volatility of the hypothetical underlying security affected the correlation between the hypothetical underlying security's return for the two-day period and Mary's return. In this situation, Mary lost more than two times the return of the hypothetical underlying security.

Example 3 — Intra-day Investment with Volatility

The examples above assumed that Mary purchased the hypothetical 2X Fund at the close of trading on Day 1 and sold her investment at the close of trading on a subsequent day. However, if she made an investment intra-day, she would have received a beta determined by the performance of the hypothetical underlying security from the end of the prior trading day until her time of purchase on the next trading day. Consider the following example.

Mary invests $10.00 in a hypothetical 2X Fund at 11 a.m. on Day 2. From the close of trading on Day 1 until 11 a.m. on Day 2, the hypothetical underlying security moved from 100 to 102, a 2% gain. In light of that gain, the hypothetical 2X Fund beta at the point at which Mary invests is 196%. During the remainder of Day 2, the hypothetical underlying security rises from 102 to 110, a gain of 7.84%, and Mary's investment rises 15.4% (which is the hypothetical underlying security gain of 7.84% multiplied by the 196% beta that she received) to $11.54. Mary continues to hold her investment through the close of trading on Day 3, during which the hypothetical underlying security declines from 110 to 90, a loss of 18.18%. Mary's investment declines by 36.4%, from $11.54 to $7.34. For the period of Mary's investment, the hypothetical underlying security declined from 102 to 90, a loss of 11.76%, while Mary's investment decreased from $10.00 to $7.34, a 27% loss. The volatility of the hypothetical underlying security affected the correlation between the hypothetical underlying security's return for period and Mary's return. In this situation, Mary lost more than two times the return of the hypothetical underlying security. Mary was also hurt because she missed the first 2% move of the hypothetical underlying security and had a beta of 196% for the remainder of Day 2.

Market Volatility. Each Fund seeks to provide a return which is a multiple of the daily performance of an underlying security. The Funds do not attempt to, and should not be expected to, provide returns which are a multiple of the return of an underlying security for periods other than a single-trading day. Each Fund rebalances its portfolio on a daily basis, increasing exposure in response to that day's gains or reducing exposure in response to that day's losses.

Daily rebalancing will impair a Fund's performance if its underlying security experiences volatility. For instance, a 2X Fund would be expected to lose 4% (as shown in Table 1 below) if its underlying security provided no return over a one-year period and experienced annualized volatility of 20%. If an underlying security provided no return over a one-year period and experienced annualized volatility of 40%, the hypothetical loss for a one-year period for a 2X Fund rises to 15% (as shown in Table 1 below).

Table 1

Volatility Range	2X Fund Loss
10%	-1%
20%	-4%
30%	-9%
40%	-15%
50%	-23%
60%	-33%
70%	-47%
80%	-55%
90%	-76%
100%	-84%

Note that at higher volatility levels, there is a chance of a complete loss of Fund assets even if the underlying security is flat. For instance, if annualized volatility of an underlying security were 90%, a 2X Fund based on such underlying security would be expected to lose 76% even if the underlying security returned 0% for the year.

Table 2 shows the annualized historical volatility rate for the underlying securities over the five-year (or shorter) period ended December 31, 2025. Since market volatility has negative implications for funds which rebalance daily, investors should be sure to monitor and manage their investments in the Funds particularly in volatile markets. The negative implications of volatility in Table 1 can be combined with the recent volatility in Table 2 to give investors some sense of the risks of holding the Funds for longer periods over the past five years (or shorter period). Historical volatility and performance are not likely indicative of future volatility and performance.

Table 2 — Historic Volatility

	5-Year Historical Volatility Rate
FCEL	95.6%
FIX	43.0%
FRVO	N/A[1]
IQMX	N/A[1]
NASA	N/A[1]
NXT	61.3%[2]
QTUM	26.3%
QXO	146.9%
SANM	40.0%
SATL	108.0%[3]
SECZ	72.0%[4]
VISN	89.7%

1 As of the date of this prospectus, volatility rates are not yet available.
2 For two-year period.
3 For four-year period.
4 For seven-month period.

The Projected Returns of Funds for Intra-Day Purchases. Because the Funds rebalance their portfolio once daily, an investor who purchases shares during a day will likely have more, or less, than the respective long leveraged investment exposure to an underlying security. The exposure to an underlying security received by an investor who purchases a Fund intra-day will differ from the Fund's stated daily investment objective by an amount determined by the movement of the underlying security from its value at the end of the prior day. If the underlying security moves in a direction favorable to the Fund between the close of the market on one trading day through the time on the next trading day when the investor purchases the Fund Shares, the investor will receive less exposure to the underlying security than the stated Fund daily investment objective. Conversely, if the underlying security moves in a direction adverse to the Fund, the investor will receive more exposure to the underlying security than the stated Fund daily investment objective.

Table 3 below indicates the exposure to an underlying security that an intra-day purchase of a 2X Fund would be expected to provide based upon the movement in the value of the underlying security from the close of the market on the prior trading day. Such exposure holds until a subsequent sale on that same trading day or until the close of the market on that trading day. For instance, if an underlying security has moved 5% in a direction favorable to a 2X Fund, the investor would receive exposure to the performance of the underlying security from that point until the investor sells later that day or the end of the day equal to approximately 191% of the investor's investment.

Conversely, if the underlying security has moved 5% in a direction unfavorable to a 2X Fund, an investor at that point would receive exposure to the performance of the underlying security from that point until the investor sells later that day or the end of the day equal to approximately 211% of the investor's investment.

The table includes a range of underlying security moves from 20% to -20% for a 2X Fund. Movement of an underlying security beyond the range noted below will result in exposure further from a 2X Fund's daily leveraged investment objective.

Table 3

Underlying Security	2X Fund
-20%	267%
-15%	243%
-10%	225%
-5%	211%
0%	200%
5%	191%
10%	183%
15%	177%
20%	171%

The Projected Returns of the Funds for Periods Other Than a Single-Trading Day. The Funds seek long leveraged investment results on a daily basis — from the close of regular trading on one trading day to the close on the next trading day — which should not be equated with seeking a long leveraged investment objective for any other period. For instance, if an underlying security gains 10% for a week, a Fund should not be expected to provide a return of 20% for the week even if it meets its daily leveraged investment objective throughout the week. This is true because of the financing charges noted above but also because the pursuit of daily goals may result in daily leveraged compounding, which means that the return of an underlying security over a period of time greater than one day multiplied by a Fund's daily leveraged investment objective or inverse daily leveraged investment objective will not generally equal a Fund's performance over that same period. In addition, the effects of compounding become greater the longer Shares are held beyond a single-trading day.

The following tables set out a range of hypothetical daily performances during a given 10 trading days of an underlying security and demonstrate how changes in an underlying security impact the Funds' hypothetical performance for a single-trading day and cumulatively up to, and including, the entire 10 trading day period. The charts are based on a hypothetical $100 investment in the Funds over a 10-trading day period and do not reflect fees or expenses of any kind.

Table 4 — Lacks a Clear Trend

	Underlying Security			2X Fund		
	Value	Daily Performance	Cumulative Performance	NAV	Daily Performance	Cumulative Performance
	100			$100.00		
Day 1	105	5.00%	5.00%	$110.00	10.00%	10.00%
Day 2	110	4.76%	10.00%	$120.48	9.52%	20.47%
Day 3	100	-9.09%	0.00%	$98.57	-18.18%	-1.43%
Day 4	90	-10.00%	-10.00%	$78.86	-20.00%	-21.14%
Day 5	85	-5.56%	-15.00%	$70.10	-11.12%	-29.91%
Day 6	100	17.65%	0.00%	$94.83	35.30%	-5.17%
Day 7	95	-5.00%	-5.00%	$85.35	-10.00%	-14.65%
Day 8	100	5.26%	0.00%	$94.34	10.52%	-5.68%
Day 9	105	5.00%	5.00%	$103.77	10.00%	3.76%
Day 10	100	-4.76%	0.00%	$93.89	-9.52%	-6.12%

The cumulative performance of the underlying security in Table 4 is 0% for 10 trading days. The hypothetical return for the 10-trading day period is -6.12% for a 2X Fund. The volatility of the underlying security's performance and lack of a clear trend results in performance for each Fund for the period which bears little relationship to the performance of the underlying security for the 10-trading day period.

Table 5 — Rises in a Clear Trend

	Underlying Security			2X Fund		
	Value	Daily Performance	Cumulative Performance	NAV	Daily Performance	Cumulative Performance
	100			$100.00		
Day 1	102	2.00%	2.00%	$104.00	4.00%	4.00%
Day 2	104	1.96%	4.00%	$108.08	3.92%	8.08%
Day 3	106	1.92%	6.00%	$112.24	3.84%	12.23%
Day 4	108	1.89%	8.00%	$116.47	3.78%	16.47%
Day 5	110	1.85%	10.00%	$120.78	3.70%	20.78%
Day 6	112	1.82%	12.00%	$125.18	3.64%	25.17%
Day 7	114	1.79%	14.00%	$129.65	3.58%	29.66%
Day 8	116	1.75%	16.00%	$134.20	3.50%	34.19%
Day 9	118	1.72%	18.00%	$138.82	3.44%	38.81%
Day 10	120	1.69%	20.00%	$143.53	3.38%	43.50%

The cumulative performance of the underlying security in Table 5 is 20% for 10 trading days. The hypothetical return for the 10-trading day period is 43.50% for a 2X Fund. In this case, because of the positive hypothetical underlying security trend, each Fund's hypothetical gain is greater than the applicable multiple of the hypothetical underlying security gain for the 10-trading day period.

Table 6 — Declines in a Clear Trend

	Underlying Security			2X Fund		
	Value	**Daily Performance**	**Cumulative Performance**	**NAV**	**Daily Performance**	**Cumulative Performance**
	100			$100.00		
Day 1	98	-2.00%	-2.00%	$96.00	-4.00%	-4.00%
Day 2	96	-2.04%	-4.00%	$92.08	-4.08%	-7.92%
Day 3	94	-2.08%	-6.00%	$88.24	-4.16%	-11.75%
Day 4	92	-2.13%	-8.00%	$84.49	-4.26%	-15.51%
Day 5	90	-2.17%	-10.00%	$80.82	-4.34%	-19.17%
Day 6	88	-2.22%	-12.00%	$77.22	-4.44%	-22.76%
Day 7	86	-2.27%	-14.00%	$73.71	-4.54%	-26.27%
Day 8	84	-2.33%	-16.00%	$70.29	-4.66%	-29.71%
Day 9	82	-2.38%	-18.00%	$66.94	-4.76%	-33.05%
Day 10	80	-2.44%	-20.00%	$63.67	-4.88%	-36.32%

The cumulative performance of the underlying security in Table 6 is -20% for 10 trading days. The hypothetical return for the 10-trading day period is -36.32% for a 2X Fund. In this case, because of the negative hypothetical underlying security trend, each Fund's hypothetical decline is less than the applicable multiple of the hypothetical underlying security decline for the 10-trading day period.

Risk is inherent in all investing. Investing in the Funds involves risk, including the risk that you may lose all or part of your investment. There can be no assurance that the Funds will meet their stated objectives. Before you invest, you should consider the following supplemental disclosure pertaining to the Principal Risks set forth above as well as additional Non-Principal Risks set forth below in this prospectus. Following the table is further information describing the Funds' principal risks listed in the table.

Principal Risks

Derivatives Risk. The Fund's use of derivatives may be considered aggressive and may expose the Fund to greater risks and larger losses or smaller gains than investing directly in the reference asset(s) underlying those derivatives. A derivative refers to any financial instrument whose value is derived, at least in part, from the price of an underlying security, asset, rate or index. The use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. Changes in the value of a derivative may not correlate perfectly with the underlying security, asset, rate or index. Gains or losses in a derivative may be magnified and may be much greater than the derivative's original cost.

- *Swaps Risk*. The Fund expects to use swaps as a means to achieve its investment objective. Swaps are generally traded in OTC markets and have only recently become subject to regulation by the CFTC. CFTC rules, however, do not cover all types of swaps. Investors, therefore, may not receive the protection of CFTC regulation or the statutory scheme of the Commodity Exchange Act in connection with the Fund's swaps. The lack of regulation in these markets could expose investors to significant losses under certain circumstances, including in the event of trading abuses or financial failure by participants. Unlike in futures contracts, the counterparty to uncleared OTC swaps is generally a single bank or other financial institution, rather than a clearing organization backed by a group of financial institutions. As a result, the Fund is subject to increased counterparty risk with respect to the amount it expects to receive from counterparties to uncleared swaps. If a counterparty becomes bankrupt or otherwise fails to perform its obligations due to financial difficulties, the Fund could suffer significant losses on these contracts and the value of an investor's investment in the Fund may decline. OTC swaps of the type that may be utilized by the Fund are less liquid than futures contracts because they are not traded on an exchange, do not have uniform terms and conditions, and are generally entered into based upon the creditworthiness of the parties and the availability of credit support, such as collateral, and in general, are not transferable without the consent of the counterparty. Swaps are also subject to the risk of imperfect correlation between the value of the reference asset underlying the swap and the swap itself. Leverage inherent in derivatives will tend to magnify the Fund's gains and losses. Moreover, with respect to the use of swaps, if the underlying issuer has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of a swap between the Fund and its counterparty may permit the counterparty to immediately close out the transaction with the Fund. In that event, the Fund may be unable to enter into another swap or invest in other derivatives to achieve the desired exposure consistent with the Fund's investment objective. This, in turn, may prevent the Fund from achieving its investment objective, even if the underlying issuer reverses all or a portion of its intraday move by the end of the day. As a result, the value of an investment in the Fund may change quickly and without warning.

- *Options Risk*. Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Fund's performance.

The Fund will be subject to regulatory constraints relating to the level of value at risk that the Fund may incur through its derivative portfolio. To the extent the Fund exceeds these regulatory thresholds over an extended period, the Fund may determine that it is necessary to make adjustments to the Fund's investment strategy, including the desired daily leveraged performance for the Fund.

Leverage Risk. Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of a Fund, and may magnify any differences between the performance of a Fund and its underlying security. Because each Fund includes a multiplier of two times (200%) its underlying security, a single-trading day movement in an underlying security approaching 50% at any point in the day could result in the total loss of an investor's investment if that movement is contrary to the investment objective of a Fund, even if the underlying security subsequently moves in an opposite direction, eliminating all or a portion of the earlier movement. This would be the case with any such single-trading day movements in the underlying security, even if the underlying security maintains a level greater than zero at all times.

Volatility Risk. Volatility is the characteristic of a security or other asset, an index or a market to fluctuate significantly in price within a short time period. The value of the Funds' investments in swaps – and therefore the value of an investment in the Funds – could decline significantly and without warning, including to zero. If you are not prepared to accept significant and unexpected changes in the value of the Funds and the possibility that you could lose your entire investment in the Funds, you should not invest in the Funds.

Compounding Risk. The Funds have a single-trading day investment objective, and the Funds' performance for any other period is the result of its return for each day compounded over the period. The performance of the Funds for periods longer or shorter than a single-trading day will very likely differ in amount, and possibly even direction, from their stated multiple of the daily return of the underlying security for the same period, before accounting for fees and expenses. Compounding affects all investments, but has a more significant impact on an inverse or leveraged fund that rebalances daily. This effect becomes more pronounced as underlying security volatility and holding periods increase. The Funds' performance for a period longer or shorter than a single-trading day can be estimated given any set of assumptions for the following factors: (a) underlying security volatility; (b) underlying security performance; (c) period of time; (d) financing rates associated with inverse or leveraged exposure; and (e) other Fund expenses. The charts below illustrate the impact of two principal factors — underlying security volatility and underlying security performance — on Fund performance. The charts show estimated returns for each Fund for a number of combinations of underlying security volatility and underlying security performance over a one-year period. Actual volatility, underlying security and Fund performance may differ significantly from the charts below. Performance shown in the charts assumes: (a) no Fund expenses; and (b) borrowing/lending rates (to obtain leveraged exposure) of zero percent. If Fund expenses and/or actual borrowing/lending rates were reflected, the Funds' performance would be lower than shown.

In the graph below, areas shaded red represent those scenarios where a 2X Fund can be expected to return less than 200% of the performance of the underlying security and those shaded green represent those scenarios where a 2X Fund can be expected to return more than 200% of the performance of the underlying security. A 2X Fund's actual returns may be significantly better or worse than the returns shown below as a result of any of the factors discussed above or in "Correlation Risk" below.

Estimated 2X Fund Returns

One Year Underlying Security	200% One Year Underlying Security	Volatility Rate				
Return	Return	10%	25%	50%	75%	100%
-60%	-120%	-84.2%	-85.0%	-87.5%	-90.9%	-94.1%
-50%	-100%	-75.2%	-76.5%	-80.5%	-85.8%	-90.8%
-40%	-80%	-64.4%	-66.2%	-72.0%	-79.5%	-86.8%
-30%	-60%	-51.5%	-54.0%	-61.8%	-72.1%	-82.0%
-20%	-40%	-36.6%	-39.9%	-50.2%	-63.5%	-76.5%
-10%	-20%	-19.8%	-23.9%	-36.9%	-53.8%	-70.2%
0%	0%	-1.0%	-6.1%	-22.1%	-43.0%	-63.2%
10%	20%	19.8%	13.7%	-5.8%	-31.1%	-55.5%
20%	40%	42.6%	35.3%	12.1%	-18.0%	-47.0%
30%	60%	67.3%	58.8%	31.6%	-3.7%	-37.8%
40%	80%	94.0%	84.1%	52.6%	11.7%	-27.9%
50%	100%	122.8%	111.4%	75.2%	28.2%	-17.2%
60%	120%	153.5%	140.5%	99.4%	45.9%	-5.8%

The foregoing table is intended to isolate the effect of underlying security volatility and underlying security performance on the return of a 2X Fund and is not a representation of actual returns. For example, a 2X Fund may incorrectly be expected to achieve a 40% return on a yearly basis if the underlying security return were 20%, absent the effects of compounding. As the table shows, with underlying security volatility of 50%, a 2X Fund could be expected to return 12.1% under such a scenario. A 2X Fund's actual returns may be significantly better or worse than the returns shown above as a result of any of the factors discussed above or in "Correlation Risk" below.

Correlation Risk. A number of factors may affect a Fund's ability to achieve a high degree of correlation with its underlying security, and there is no guarantee that the Funds will achieve a high degree of correlation. Failure to achieve a high degree of correlation may prevent the Funds from achieving their investment objectives, and the percentage change of a Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from their stated multiple of the percentage change of the underlying security on such day.

In order to achieve a high degree of correlation with its underlying security, each Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to its underlying security may prevent a Fund from achieving a high degree of correlation with its underlying security and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which a Fund invests, and other factors will adversely affect a Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by an underlying security's movements, including intraday movements. Because of this, it is unlikely that a Fund will have perfect exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when the underlying security is volatile, particularly when the underlying security is volatile at or near the close of the trading day.

A number of other factors may also adversely affect a Fund's correlation with its underlying security, including fees, expenses, transaction costs, financing costs associated with the use of derivatives, income items, valuation methodology, accounting standards and disruptions or illiquidity in the markets for the securities or financial instruments in which a Fund invests. The Funds may take or refrain from taking positions in order to improve tax efficiency, comply with regulatory restrictions, or for other reasons, each of which may negatively affect the Funds' correlation with the underlying securities. The Funds may also be subject to large movements of assets into and out of the Funds, potentially resulting in the Funds being under- or overexposed to the underlying securities. Additionally, the Funds' underlying investments and/or reference assets may trade on markets that may not be open on the same day as the Funds, which may cause a difference between the changes in the daily performance of the Funds and changes in the level of the underlying securities. Any of these factors could decrease correlation between the performance of the Funds and the underlying securities and may hinder a Fund's ability to meet its daily investment objective on or around that day.

Rebalancing Risk. If for any reason a Fund is unable to rebalance all or a portion of its portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, a Fund's investment exposure may not be consistent with the Fund's investment objective. In these instances, a Fund may have investment exposure to its underlying security that is significantly greater or less than its stated multiple. As a result, a Fund may be more exposed to leverage risk than if they had been properly rebalanced and may not achieve its investment objective.

Trading Halt Risk. Securities exchanges may apply different rules with respect to trading halts. In addition, exchanges may treat stocks differently than shares of ETFs with respect to trading halts. Although the underlying issuers' shares and the Funds' shares are listed for trading on an exchange, there can be no assurance that an active trading market for such shares will be available at all times and the exchange may halt trading of such shares in certain circumstances. In the event of a trading halt for an extended period of time in the underlying issuer's and/or the Fund's Shares, the Fund may be unable to execute arrangements with swap counterparties that are necessary to implement the Fund's investment strategy. Trading halts of the underlying issuer's and/or the Fund's Shares can occur for "regulatory" or "non-regulatory" reasons. A regulatory halt may occur when a company has pending news that may affect the security's price, when there is uncertainty over whether the security continues to meet an exchange's listing standards, or when a regulator specifically suspends trading in a security. When a regulatory halt is imposed by a security's primary exchange, the other U.S. exchanges that also trade the security usually honor this halt. A non-regulatory halt generally occurs when there is a significant imbalance in the pending buy and sell orders in a security or because of extraordinary market volatility pursuant to exchange "circuit breaker" rules. A non-regulatory trading halt or delay on one exchange does not necessarily

mean that other exchanges will halt a security from trading. Regulatory trading halts of an underlying issuer's shares are expected to result in a halt in the trading in the Fund's Shares. However, not all non-regulatory trading halts affecting an underlying issuer's shares will result in a trading halt of the Fund's Shares. To the extent trading in an underlying issuer's shares is halted while the Fund's Shares continue to trade, the Fund may not perform as intended.

Counterparty Risk. Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Funds will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount they expect to receive from counterparties to derivatives and repurchase agreements entered into by the Funds. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Funds are insufficient or there are delays in the Funds' ability to access such collateral, the value of an investment in the Funds may decline.

Indirect Investment Risk. The issuers of the underlying securities are not affiliated with the Trust, the Advisor, or any affiliates thereof and is not involved with this offering in any way, and has no obligation to consider the Fund in taking any corporate actions that might affect the value of Shares. The Advisor has not made any due diligence inquiry with respect to the publicly available information of the underlying issuers in connection with this offering. Investors in the Shares will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the common shares of the underlying issuers.

Intraday Price Performance Risk. The intraday performance of Shares of the Funds traded in the secondary market generally will be different from the performance of the Funds when measured from one NAV calculation-time to the next. When Shares are bought intraday, the performance of a Fund's Shares relative to its underlying security until the Fund's next NAV calculation time will generally be greater than or less than the Fund's stated multiple times the performance of the underlying security.

Liquidity Risk. In certain circumstances, such as the disruption of the orderly markets for the financial instruments in which the Funds invest, the Funds might not be able to acquire or dispose of certain holdings quickly or at prices that represent true market value in the judgment of the Advisor. Markets for the financial instruments in which the Funds invest may be disrupted by a number of events, including but not limited to economic crises, health crises, natural disasters, excessive volatility, new legislation, or regulatory changes inside or outside of the U.S. For example, regulation limiting the ability of certain financial institutions to invest in certain financial instruments would likely reduce the liquidity of those instruments. These situations may prevent a Fund from limiting losses, realizing gains or achieving a high long leveraged correlation with its underlying security.

Portfolio Turnover Risk. The Funds may incur high portfolio turnover to manage the Funds' investment exposure. Additionally, active market trading of the Funds' Shares may cause more frequent creation or redemption activities that could, in certain circumstances, increase the number of portfolio transactions. High levels of portfolio transactions increase brokerage and other transaction costs and may result in increased taxable capital gains. Each of these factors could have a negative impact on the performance of the Funds.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic, political, or geopolitical conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as tariffs, labor shortages or increased production costs and competitive conditions within an industry. In addition, local, regional or global events such as war, acts of terrorism, international conflicts, trade disputes, supply chain disruptions, cybersecurity events, technological advances (such as artificial intelligence and machine learning), the spread of infectious illness or other public health issues, natural disasters or climate events, or other events could have a significant impact on a security or instrument. Such events could make identifying investment risks and opportunities especially difficult for the Advisor. In response to certain crises, the United States and other governments have taken steps to support financial markets. The withdrawal of this support or failure of efforts in response to a crisis could negatively affect financial markets generally as

well as the value and liquidity of certain securities. In addition, policy and legislative changes in the United States and in other countries are changing many aspects of financial regulation. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market.

Valuation Risk. The Funds may hold securities or other assets that may be valued on the basis of factors other than market quotations. This may occur because the asset or security does not trade on a centralized exchange, or in times of market turmoil or reduced liquidity. There are multiple methods that can be used to value a portfolio holding when market quotations are not readily available. The value established for any portfolio holding at a point in time might differ from what would be produced using a different methodology or if it had been priced using market quotations. Portfolio holdings that are valued using techniques other than market quotations, including "fair valued" assets or securities, may be subject to greater fluctuation in their valuations from one day to the next than if market quotations were used. In addition, there is no assurance that the Funds could sell or close out a portfolio position for the value established for it at any time, and it is possible that the Funds would incur a loss because a portfolio position is sold or closed out at a discount to the valuation established by the Funds at that time. The Funds' ability to value investments may be impacted by technological issues or errors by pricing services or other third-party service providers.

Concentration Risk. Each Fund will be concentrated in the industry assigned to its underlying issuer (i.e., hold more than 25% of its total assets in investments that provide long leveraged, inverse or inverse leveraged exposure, as applicable, to the industry assigned to the underlying issuer). A portfolio concentrated in a particular industry may present more risks than a portfolio broadly diversified over several industries.

Collateral Investments Risk. The Funds' use of Collateral Investments may include obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, including bills, notes and bonds issued by the U.S. Treasury, money market funds, short-term bond ETFs and corporate debt securities, such as commercial paper. Some securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may not be backed by the full faith and credit of the United States, in which case the investor must look principally to the agency or instrumentality issuing or guaranteeing the security for ultimate repayment, and may not be able to assert a claim against the United States itself in the event that the agency or instrumentality does not meet its commitment. The U.S. Government, its agencies and instrumentalities do not guarantee the market value of their securities, and consequently, the value of such securities may fluctuate. Although the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to Shares of the Fund.

Money market funds are subject to management fees and other expenses. Therefore, investments in money market funds will cause a Fund to bear indirectly a proportional share of the fees and costs of the money market funds in which it invests. At the same time, the Fund will continue to pay its own management fees and expenses with respect to all of its assets, including any portion invested in the shares of the money market fund. It is possible to lose money by investing in money market funds.

Short-term bond ETFs will generally invest in short-term instruments (i.e., duration of less than one year). The amount of time until a fixed-income security matures can lead to various risks, including changes in interest rates over the life of a bond. Short-term fixed income securities generally provide lower returns than longer-term fixed income securities. The average maturity of an ETF's investments will affect the volatility of the ETF's share price.

Corporate debt securities such as commercial paper generally are short-term unsecured promissory notes issued by businesses. Corporate debt may be rated investment-grade or below investment-grade and may carry variable or floating rates of interest. Corporate debt securities carry both credit risk and interest rate risk. Credit risk is the risk that the Fund could lose money if the issuer of a corporate debt security is unable to pay interest or repay principal when it is due. Some corporate debt securities that are rated below investment-grade generally are considered speculative because they present a greater risk of loss, including default, than higher quality debt securities.

The Funds' Collateral Investments are subject to the following risks:

- *Debt Securities Risk.* Investments in debt securities subject the holder to the credit risk of the issuer. Credit risk refers to the possibility that the issuer or other obligor of a security will not be able or willing to make payments of interest and principal when due. Generally, the value of debt securities will change inversely with changes in interest rates. To the extent that interest rates rise, certain underlying obligations may be paid off substantially slower than originally anticipated and the value of those securities may fall sharply. During periods of falling interest rates, the income received by a Fund may decline. If the principal on a debt security is prepaid before expected, the prepayments of principal may have to be reinvested in obligations paying interest at lower rates. Debt securities generally do not trade on a securities exchange making them generally less liquid and more difficult to value than common stock.

- *Call Risk.* Some debt securities may be redeemed, or "called," at the option of the issuer before their stated maturity date. In general, an issuer will call its debt securities if they can be refinanced by issuing new debt securities which bear a lower interest rate. The Funds are subject to the possibility that during periods of falling interest rates an issuer will call its high yielding debt securities. The Funds would then be forced to invest the proceeds at lower interest rates, likely resulting in a decline in the Funds' income.

- *Interest Rate Risk.* Interest rate risk is the risk that the value of the debt securities in the Funds' portfolio will decline because of rising market interest rates. Interest rate risk is generally lower for shorter term debt securities and higher for longer-term debt securities. The Funds may be subject to a greater risk of rising interest rates than would normally be the case due to the current period of historically low rates and the effect of potential government fiscal policy initiatives and resulting market reaction to those initiatives. Duration is a reasonably accurate measure of a debt security's price sensitivity to changes in interest rates and a common measure of interest rate risk. Duration measures a debt security's expected life on a present value basis, taking into account the debt security's yield, interest payments and final maturity. In general, duration represents the expected percentage change in the value of a security for an immediate 1% change in interest rates. For example, the price of a debt security with a three-year duration would be expected to drop by approximately 3% in response to a 1% increase in interest rates. Therefore, prices of debt securities with shorter durations tend to be less sensitive to interest rate changes than debt securities with longer durations. As the value of a debt security changes over time, so will its duration.

- *Credit Risk.* An issuer or other obligated party of a debt security may be unable or unwilling to make dividend, interest and/or principal payments when due. In addition, the value of a debt security may decline because of concerns about the issuer's ability or unwillingness to make such payments.

Large-Cap Company Risk. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large-capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

Mid-Cap Company Risk. Generally, investing in mid-cap companies may have more potential growth than large-cap companies. Investing in mid-capitalization companies generally involves greater risks than investing in large-capitalization companies. Mid-cap companies may have limited product lines, markets or financial resources or may depend on the expertise of a few people and may be subject to more abrupt or erratic market movements than securities of larger, more established companies or market averages in general. In addition, mid-cap companies may be particularly affected by interest rate increases, as they may find it more difficult to borrow money to continue or expand operations or may have difficulty in repaying any loans. Mid-cap company stocks may also be bought or sold less often and in smaller amounts than larger company stocks, making them less liquid than other securities.

Small-Cap Company Risk. Generally, small-cap and less seasoned companies have more potential for rapid growth. They also involve greater risks than investing in large- or mid-capitalization companies. Small-cap companies may have limited product lines, markets or financial resources or may depend on the expertise of a few people and may be subject to more abrupt or erratic market movements than securities of larger, more established companies or market averages in

general. Many small-cap companies may be in the early stages of development. In addition, small-cap companies may be particularly affected by interest rate increases, as they may find it more difficult to borrow money to continue or expand operations or may have difficulty in repaying any loans. Since equity securities of smaller companies may lack sufficient market liquidity and may not be regularly traded, it may be difficult or impossible to sell securities at an advantageous time or a desirable price.

Micro-Cap Company Risk. Micro-capitalization companies are subject to substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses). Their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities.

Market Capitalization Risk. Larger, more established companies may be unable to attain the high growth rates of successful, smaller companies during periods of economic expansion. In addition, large-capitalization companies may be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes and may be more prone to global economic risks. Investing in small-capitalization and mid-capitalization companies generally involves greater risks than investing in large-capitalization companies. Small- or mid-cap companies may have limited product lines, markets or financial resources or may depend on the expertise of a few people and may be subject to more abrupt or erratic market movements than securities of larger, more established companies or market averages in general. Many small capitalization companies may be in the early stages of development. Since equity securities of smaller companies may lack sufficient market liquidity and may not be regularly traded, it may be difficult or impossible to sell securities at an advantageous time or a desirable price.

ETF Structure Risks. Each Fund is an ETF, and, as a result of an ETF's structure, it is exposed to the following risks:

- *Authorized Participant Concentration Risk.* Only an AP may engage in creation or redemption transactions directly with the Funds. The Funds have a limited number of institutions that act as APs on an agency basis (i.e. on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to a Fund and no other AP is able to step forward to process creation or redemption orders, Shares may trade at a discount to the Fund's NAV and possibly face delisting.

- *Cash Transaction Risk.* To the extent a Fund sells portfolio securities to meet some or all of a redemption request with cash, the Fund may incur taxable gains or losses that it might not have incurred had it made redemptions entirely in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

- *Costs of Buying or Selling Shares.* Investors buying or selling shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of shares. In addition, secondary market investors will also incur the cost of the difference between the price at which an investor is willing to buy Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid-ask spread." The bid-ask spread varies over time for shares based on trading volume and market liquidity, and the spread is generally lower if shares have more trading volume and market liquidity and higher if shares have little trading volume and market liquidity. Further, a relatively small investor base in a Fund, asset swings in a Fund, and/or increased market volatility may cause increased bid-ask spreads. Due to the costs of buying or selling shares, including bid-ask spreads, frequent trading of shares may significantly reduce investment results and an investment in shares may not be advisable for investors who anticipate regularly making small investments.

- *Fluctuation of NAV Risk.* As with all ETFs, shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of shares will approximate the Fund's NAV, there may be times when the market price of shares is more than the NAV intra-day (premium) or less than the NAV

intra-day (discount). Differences in market price and NAV may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. These differences can be especially pronounced during times of market volatility or stress. During these periods, the demand for Fund Shares may decrease considerably and cause the market price of Fund Shares to deviate significantly from the Fund's NAV. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market in which the ETF's shares are listed and trading is open, there may be changes from the last quote from the closed market and the value of such security during the ETF's domestic trading day, which could lead to differences between the market price of the ETF's shares and their underlying NAV.

- *Market Maker Risk.* If a Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's NAV and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or APs to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of a Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to NAV and also in greater than normal intra-day bid-ask spreads for Shares.

- *Shares are Not Individually Redeemable.* Shares are only redeemable by the Funds at NAV if they are tendered in Creation Units. Only APs may engage in such creation and redemption transactions directly with the Funds. Individual Shares may be sold on a stock exchange at their current market prices, which may be less, more, or equal to their NAV.

- *Trading Issues Risk.* Although the Funds' Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for Fund Shares will develop or be maintained. Trading in Fund Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Fund Shares inadvisable. In addition, trading in Fund Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange "circuit breaker" rules. Market makers are under no obligation to make a market in the Fund Shares, and APs are not obligated to submit purchase or redemption orders for Creation Units. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Funds will continue to be met or will remain unchanged. Initially, due to the small asset size of the Funds, they may have difficulty maintaining their listings on the Exchange.

Active Management Risk. The Funds are actively-managed and their performance reflects investment decisions that the Advisor makes for the Funds. Such judgments about the Funds' investments may prove to be incorrect. If the investments selected and the strategies employed by the Funds fail to produce the intended results, the Funds could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Operational Risk. The Funds are exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Funds' service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Funds and the Advisor seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

New Fund Risk. As of the date of this prospectus, the Funds have no operating history and currently have fewer assets than larger funds.

Non-Diversification Risk. The Funds are classified as "non-diversified" under the 1940 Act. As a result, the Funds are only limited as to the percentage of their assets which may be invested in the securities of any one issuer by the diversification requirements imposed by the Code. The Funds seek to achieve daily results that correspond to a multiple of the daily performance of a single issuer by entering into one or more swaps. In seeking this objective, the Funds may

invest a relatively high percentage of their assets in swaps with a single counterparty or a few counterparties. As a result, the Funds may experience increased volatility and be more susceptible to a single economic or regulatory occurrence affecting the issuer or one or more of the counterparties.

Tax Risk. In order to qualify for the favorable tax treatment generally available to regulated investment companies, the Funds must satisfy certain diversification and other requirements. In particular, a Fund generally may not acquire a security if, as a result of the acquisition, more than 50% of the value of the Fund's assets would be invested in (a) issuers in which the Fund has, in each case, invested more than 5% of the Fund's assets and (b) issuers more than 10% of whose outstanding voting securities are owned by the Fund. The application of these requirements to certain investments (including swaps and options) that may be entered into by the Funds is unclear. In addition, the application of these requirements to a Fund's investment objective is not clear, particularly because the Fund's investment objective focuses on the performance of the stock of a single issuer. If a Fund were to fail to qualify as a regulated investment company, it would be taxed in the same manner as an ordinary corporation, and distributions to its shareholders would not be deductible by the Fund in computing its taxable income.

Issuer Risk. Issuer-specific attributes may cause a security held by the Funds to be more volatile than the market generally. The prices of, and income generated by, securities held by the Fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in the issuer's financial condition or credit rating, changes in government regulation affecting the issuer or its competitive environment, and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives. An individual security may also be affected by factors related to the industry or sector of the issuer or the securities markets as a whole, and conversely an industry or sector or the securities markets may be affected by a change in financial condition or another event affecting a single issuer. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole. To the extent that the securities of issuers in the same or related industries or sectors behave similarly to each other, and these issuers make up a sizeable portion of the market, events affecting one issuer, industry or sector or the securities markets generally may have a larger impact. If such issuers represent a substantial portion of major market indices, a downturn in their stock prices may have a disproportionate adverse effect on the overall equity markets, even if other segments of the market perform well.

Aerospace and Defense Industry Risk. Government aerospace and defense regulation and spending policies can significantly affect the aerospace and defense industry, as companies involved in the aerospace and defense industry rely to a large extent on U.S. (and other) Government demand for their products and services. There are significant inherent risks in contracting with the U.S. Government, which could have a material adverse effect on the business, financial condition and results of operations of industry participants, including:

- termination by the U.S. Government of any contract as a result of a default by industry participants could subject them to liability for the excess costs incurred by the U.S. Government in procuring undelivered items from another source;

- termination by the U.S. Government of any contract for convenience generally would limit industry participants recovery to costs already incurred or committed and limit participants profit to work completed prior to termination;

- modification of U.S. Government contracts due to lack of congressional funding or changes in such funding could subject certain contracts to termination or modification;

- failure to comply, even inadvertently, with the extensive and complex U.S. Government laws and regulations applicable to certain U.S. Government contracts and the laws governing the export of controlled products and commodities could subject industry participants to contract termination, civil and criminal penalties and, under certain circumstances, suspension from future U.S. Government contracts and exporting of products for a specific period of time;

- results of routine U.S. Government audits and review could, in certain circumstances, lead to adjustments to industry contract prices, which could be significant; and

- successful bids for U.S. Government contracts or the profitability of such contracts, if awarded, cannot be guaranteed in the light of the competitive bidding atmosphere under which U.S. Government contracts are awarded.

Furthermore, because companies involved in the aerospace and defense industry rely to a large extent on U.S. (and other) Government demand for their products and services, those companies could be adversely impacted by future reductions or changes in government spending. Government spending in aerospace and defense generally is not correlated with any economic cycle, but rather, on the cycle of general political support for this type of spending. However, there is no assurance that future levels of aerospace and defense spending will increase or that levels of aerospace and defense spending will not decrease in the future.

In addition, competition within the industry, labor relations and the price of fuel can affect the aerospace and defense industry. Airline deregulation has substantially diminished the U.S. Government's role in the air transport industry while promoting an increased level of competition. However, regulations and policies of various domestic and foreign governments can still affect the profitability of individual carriers as well as the entire industry.

AI Technology Risk. AI technology is generally highly reliant on the collection and analysis of large amounts of data, and it is not possible or practicable to incorporate all relevant data into the model that such AI utilizes to operate. Certain data in such models will inevitably contain a degree of inaccuracy and error — potentially materially so — and could otherwise be inadequate or flawed, which would be likely to degrade the effectiveness of the AI technology.

Companies involved in, or exposed to, AI-related businesses may have limited product lines, markets, financial resources or personnel. These companies face intense competition and potentially rapid product obsolescence, and many depend significantly on retaining and growing the consumer base of their respective products and services. Many of these companies are also reliant on the end-user demand of products and services in various industries that may in part utilize artificial intelligence. Further, many companies involved in, or exposed to, AI-related businesses may be substantially exposed to the market and business risks of other industries or sectors, and the Fund may be adversely affected by negative developments impacting those companies, industries or sectors.

In addition, these companies are heavily dependent on intellectual property rights and may be adversely affected by loss or impairment of those rights. There can be no assurance that companies involved in AI will be able to successfully protect their intellectual property to prevent the misappropriation of their technology, or that competitors will not develop technology that is substantially similar or superior to such companies' technology. Legal and regulatory changes, particularly related to information privacy and data protection, may have an impact on a company's products or services. Companies engaged in artificial intelligence-related activities could face increasing regulatory scrutiny in the future, which may limit the development of this technology and impede the growth of companies that develop and/or utilize this technology. AI companies typically engage in significant amounts of spending on research and development, and there is no guarantee that the products or services produced by these companies will be successful. AI companies, especially smaller companies, tend to be more volatile than companies that do not rely heavily on technology.

AI companies are potential targets for cyberattacks, which can have a materially adverse impact on the performance of these companies. In addition, the collection of data from consumers and other sources could face increased scrutiny as regulators consider how the data is collected, stored, safeguarded and used. AI and data services companies may face regulatory fines and penalties, including potential forced break-ups, that could hinder the ability of the companies to operate on an ongoing basis.

Building Products Industry Risk. Companies in the building products industry are affected by supply and demand both for their specific product or service, overall capital spending levels, which are influenced by an individual company's profitability, and broader factors such as interest rates, commodity prices, technical obsolescence, government regulation, import controls and worldwide competition. . Companies in this industry can also be adversely affected by liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution control.

Communications Equipment Industry Risk. Failure to obtain, or delays in obtaining, financing or regulatory approval, intense competition, product compatibility, consumer preferences, corporate capital expenditures, and rapid obsolescence can significantly affect the communications equipment industry. Communications services companies are subject to extensive government regulation. The costs of complying with governmental regulations, delays or failure to receive required regulatory approvals, or the enactment of new adverse regulatory requirements may adversely affect the business of such companies. These companies can also be significantly affected by competition with alternative technologies, product compatibility, consumer preferences, rapid product obsolescence, and research and development of new products. Technological innovations may make the products and services of such companies obsolete.

Computer Hardware Industry Risk. The computer hardware industry includes companies that manufacture and distribute computers, servers, mainframes, peripheral devices (e.g., keyboard, mouse, etc.), high-technology components (e.g., circuit boards), and electronic office equipment. In addition, companies in the computer hardware industry include producers and distributors of semiconductors and other integrated chips, other products related to the semiconductor industry such as motherboards, and manufacturers of high-technology tools and/or equipment used in the creation of semiconductors, photonics, wafers, and other high-technology components. Companies in the computer hardware industry can be significantly affected by competitive pressures, aggressive pricing, technological developments, changing domestic demand, the ability to attract and retain skilled employees, and availability and price of components. The market for products produced by companies in the computer hardware industry is characterized by rapidly changing technology, rapid product obsolescence, cyclical market patterns, evolving industry standards and frequent new product introductions. An unexpected change in one or more of the technologies affecting an issuer's products or in the market for products based on a particular technology could have a material adverse effect on a participant's operating results. Many of the companies in the computer hardware industry rely on a combination of patents, copyrights, trademarks and trade secret laws to establish and protect their proprietary rights in their products and technologies. There can be no assurance that the steps taken by the companies to protect their proprietary rights will be adequate to prevent misappropriation of their technology or that competitors will not independently develop technologies that are substantially equivalent or superior to such companies' technology.

Digital Asset Markets Risk. Recent developments in the digital asset economy have led to extreme volatility and disruption in digital asset markets, a loss of confidence in participants of the digital asset ecosystem, significant negative publicity surrounding digital assets broadly and market-wide declines in liquidity. In recent years, digital asset prices have fluctuated widely. This has led to volatility and disruption in the digital asset markets and financial difficulties for several prominent industry participants, including digital asset trading platforms, hedge funds and lending platforms, including several bankruptcies. This resulted in a loss of confidence in participants in the digital asset ecosystem and market-wide declines in digital asset trading prices and liquidity. These events have led to a substantial increase in regulatory and enforcement scrutiny of the industry as a whole and of digital asset trading platforms, including from the U.S. Department of Justice, the SEC, the CFTC, the President and Congress. These events have also led to significant negative publicity around digital asset market participants. This publicity could negatively impact the reputation of the Fund and/or the Advisor and have an adverse effect on the trading price and/or the value of the Fund's Shares. Moreover, sales of a significant number of Shares of the Fund as a result of these events could have a negative impact on the trading price of the Shares. Continued disruption and instability in the digital asset markets as these events develop, including further declines in the trading prices and liquidity of digital assets could have a material adverse effect on the value of the Shares and the Shares could lose all or substantially all of their value. These events are continuing to develop at a rapid pace and it is not possible to predict at this time all of the risks that they may pose to the Fund and the Advisor.

Electric Utilities Industry Risk. The electrical utilities industry can be significantly affected by general economic trends, including employment, economic growth, interest rates, and changes in commodity prices. Electric utilities companies are subject to the risks of technical obsolescence, and their profitability may be affected by government regulation and spending, import controls and worldwide competition. Companies in these industries also can be adversely affected by liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution control. These factors may result in a material adverse impact on the Fund's portfolio securities and the performance of the Fund.

Electrical Equipment & Parts Industry Risk. The electrical equipment and parts industry is exposed to risks arising from cyclical demand, reliance on global supply chains, and sensitivity to raw material and energy costs. Businesses in this sector face competitive pressures, rapid technological change, and the need for continuous innovation to meet evolving efficiency, safety, and sustainability standards. Regulatory requirements related to product safety, environmental

compliance, and energy usage may increase costs or restrict certain markets. Supply chain disruptions, shortages of key components, and reliance on specialized labor can also affect production and delivery capabilities. In addition, fluctuations in construction activity, industrial investment, and overall economic conditions directly influence demand. These factors collectively may materially impact the performance and profitability of companies in the industry.

Electronics Components Industry Risk. Electronics components companies can be significantly affected by competitive pressures, fluctuations in demand, technological developments, rapid product obsolescence, cyclical market patterns, evolving industry standards, and reliance on global supply chains. The market for products produced by electronics components companies is characterized by intense competition, frequent innovation, short product life cycles, and sensitivity to broader economic conditions. The success of electronics components companies depends in substantial part on their ability to anticipate technological changes, manage supply chain disruptions, introduce new products on a timely basis, and meet customer specifications and quality requirements. Unexpected shifts in demand, shortages of key raw materials or subcomponents, or changes in the technologies used in end markets could have a material adverse effect on a participant's operating results. Many electronic component companies rely on a combination of patents, trade secrets, and specialized manufacturing know-how to protect their products and processes. There can be no assurance that the steps taken by electronics components companies to protect their proprietary rights will be adequate to prevent misappropriation or that competitors will not independently develop technologies or products that are substantially equivalent or superior.

Energy Sector Risk. Issuers in energy-related industries can be significantly affected by fluctuations in energy prices and supply and demand of energy fuels caused by geopolitical events, energy conservation or use of alternative fuel sources, the success of exploration projects, weather or meteorological events, taxes, increased governmental or environmental regulation, resource depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, or terrorist threats or attacks, among others. Markets for various energy-related commodities can have significant volatility, and are subject to control or manipulation by large producers or purchasers. Companies in the energy sector may need to make substantial expenditures, and to incur significant amounts of debt, in order to maintain or expand their reserves through exploration of new sources of supply, through the development of existing sources, through acquisitions, or through long-term contracts to acquire reserves. Factors adversely affecting producers, refiners, distributors, or others in the energy sector may affect adversely companies that service or supply those entities, either because demand for those services or products is curtailed, or those services or products come under price pressure.

Engineering and Construction Industry Risk. Companies in engineering and construction industry may be significantly affected by changes in demand for their specific products or services, government spending, zoning laws, general economic conditions, interest rates, commodity prices, consumer confidence and spending, taxation, demographic patterns, real estate values, labor relations and government regulations. Such companies are also at risk from technical obsolescence and delays in modernization. Certain engineering and construction companies may also be significantly affected by environmental clean-up costs and catastrophic events such as earthquakes, hurricanes, tornadoes and terrorist acts.

Financial Services Industry Risk. Companies in the financial services industry are subject to extensive governmental regulation, which may limit both the amounts and types of loans and other financial commitments they can make, the interest rates and fees they can charge, the scope of their activities, the prices they can charge and the amount of capital they must maintain. Profitability is largely dependent on the availability and cost of capital funds and can fluctuate significantly when interest rates change or due to increased competition. In addition, deterioration of the credit markets generally may cause an adverse impact in a broad range of markets, including U.S. and international credit and interbank money markets generally, thereby affecting a wide range of financial institutions and markets. Certain events in the financial sector may cause an unusually high degree of volatility in the financial markets, both domestic and foreign, and cause certain financial services companies to incur large losses. Securities of financial services companies may experience a dramatic decline in value when such companies experience substantial declines in the valuations of their assets, take action to raise capital (such as the issuance of debt or equity securities), or cease operations. Credit losses resulting from financial difficulties of borrowers and financial losses associated with investment activities can negatively impact the sector. Adverse economic, business or political developments could adversely affect financial institutions engaged in mortgage finance or other lending or investing activities directly or indirectly connected to the value of real estate.

FinTech Companies Risk. FinTech companies may be adversely impacted by government regulations, economic conditions and deterioration in credit markets. These companies may have significant exposure to consumers and businesses (especially small businesses) in the form of loans and other financial products or services. FinTech companies typically face intense competition and potentially rapid product obsolescence. In addition, many FinTech companies store sensitive consumer information and could be the target of cybersecurity attacks and other types of theft, which could have a negative impact on these companies. Many FinTech companies currently operate under less regulatory scrutiny than traditional financial services companies and banks, but there is significant risk that regulatory oversight could increase in the future. Higher levels of regulation could increase costs and adversely impact the current business models of some FinTech companies. These companies could be negatively impacted by disruptions in service caused by hardware or software failure, or by interruptions or delays in service by third-party data center hosting facilities and maintenance providers. FinTech companies involved in alternative currencies may face slow adoption rates and be subject to higher levels of regulatory scrutiny in the future, which could severely impact the viability of these companies. In November 2022, the collapse and subsequent Chapter 11 bankruptcy of major cryptocurrency trading platforms FTX and BlockFi severely impacted investor confidence in cryptocurrencies and prompted calls for more regulatory action. FinTech companies, especially smaller companies, tend to be more volatile than companies that do not rely heavily on technology. The customers and/or suppliers of FinTech companies may be concentrated in a particular country, region or industry. Any adverse event affecting one of these countries, regions or industries could have a negative impact on FinTech companies.

Industrials Sector Risk. Industrial companies are affected by supply and demand both for their specific product or service and for industrial sector products and services in general. Government regulation, world events, exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies. Aerospace and defense companies, a component of the industrial sector, can be significantly affected by government spending policies because companies involved in this industry rely, to a significant extent, on U.S. and foreign government demand for their products and services. Thus, the financial condition of, and investor interest in, aerospace and defense companies are heavily influenced by governmental defense spending policies which are typically under pressure from efforts to control the U.S. (and other) government budgets. Transportation securities, another component of the industrial sector, are cyclical and have occasional sharp price movements which may result from changes in the economy, fuel prices, labor agreements and insurance costs.

Information Technology Sector Risk. The information technology sector includes companies engaged in internet software and services, technology hardware and storage peripherals, electronic equipment instruments and components, and semiconductors and semiconductor equipment. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Information technology companies may have limited product lines, markets, or financial resources. The products of information technology companies may face rapid product obsolescence due to technological developments and frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified technology personnel. Failure to introduce new products, develop and maintain a loyal customer base, or achieve general market acceptance for their products could have a material adverse effect on a company's business. Companies in the information technology sector are heavily dependent on intellectual property and the loss of patent, copyright and trademark protections may adversely affect the profitability of these companies. There can be no assurance that the steps taken by companies to protect their proprietary rights will be adequate to prevent misappropriation of their technology or that competitors will not independently develop technologies that are substantially equivalent or superior to such companies' technology. Some companies in the information technology sector are facing increased government and regulatory scrutiny and may be subject to adverse government or regulatory action, which could negatively impact the value of their securities.

Materials Sector Risk. Performance of companies in the materials sector can be significantly impacted by the level and volatility of commodity prices, the exchange value of the dollar, import and export controls, increased competition, liability for environmental damage, depletion of resources, and mandated expenditures for safety and pollution controls. The production of industrial materials often exceeds demand as a result of over-building or economic downturns, leading to poor investment returns. Companies in the materials sector also are at risk for environmental damage and product liability claims and may incur significant environmental remediation costs in complying with environmental laws.

Quantum Computing Companies Risk. Companies engaged in the development of quantum computing or machine learning technology may be significantly impacted by rapid technological advancements, product obsolescence, intense competition, consumer demand, and government regulation. Such companies are also heavily dependent upon patent and intellectual property rights. A company's success in obtaining or protecting a patent related to quantum computing or machine learning, including the associated costs, are critical factors that may affect such company's profitability. In addition, tariffs placed on specialized components and/or raw materials used by such companies may increase costs and delay progress associated with research and development in quantum computing and machine learning.

Renewable Energy Company Risk. The value of Fund Shares may be affected by events that adversely affect companies in renewable energy industry. These can include adverse political and regulatory changes, poor weather conditions for renewable power generation, falling power prices, technological obsolescence, competition and general economic conditions.

Solar Industry Risk. The value of stocks that comprise the energy sector and the prices of energy may decline. The alternative energy industry can be significantly affected by obsolescence of existing technology, short product lifecycles, falling prices and profits, competition from new market entrants and general economic conditions. This industry can also be significantly affected by fluctuations in energy prices and supply and demand of alternative energy fuels, energy conservation, the success of exploration projects, tax incentives, subsidies and other government regulations and policies. Companies in this industry may be adversely affected by commodity price volatility, changes in exchange rates, imposition of import controls, availability of certain inputs and materials required for production, depletion of resources, technological developments and labor relations. Solar energy companies are particularly affected by government subsidies and regulation. If government subsidies and economic incentives for solar power are reduced or eliminated, the demand for solar energy may decline and cause corresponding declines in the revenues and profits of solar energy companies. Existing regulations and policies, and changes to such regulations and policies, may present technical, regulatory and economic barriers to the purchase and use of solar power products, thus reducing demand for such products. If solar power technology is not suitable for widespread adoption, or sufficient demand for solar power products does not develop or takes long periods of time to develop, the revenues of solar power companies may decline.

Recently, the price of oil has declined significantly and experienced significant volatility, which may materially impact companies operating in the solar energy sector. Shares of companies involved in the solar energy sector have historically been more volatile than shares of companies operating in more established industries. Certain valuation methods currently used to value companies involved in the solar energy sector have not been in widespread use for a significant period of time. As a result, the use of these valuation methods may serve to further increase the volatility of certain solar energy company share prices.

Telecommunications Sector Risk. The telecommunications sector is subject to extensive government regulation. The costs of complying with governmental regulations, delays or failure to receive required regulatory approvals or the enactment of new adverse regulatory requirements may adversely affect the business of the telecommunications companies. The telecommunications sector can also be significantly affected by intense competition, including competition with alternative technologies such as wireless communications, product compatibility, consumer preferences, rapid obsolescence and research and development of new 16 products. Other risks include those related to regulatory changes, such as the uncertainties resulting from such companies' diversification into new domestic and international businesses, as well as agreements by any such companies linking future rate increases to inflation or other factors not directly related to the actual operating profits of the otherwise.

Utilities Sector Risk. Utility companies are affected by supply and demand, operating costs, government regulation, environmental factors, liabilities for environmental damage and general civil liabilities, and rate caps or rate changes. Although rate changes of a regulated utility usually fluctuate in approximate correlation with financing costs, due to political and regulatory factors, rate changes ordinarily occur only following a delay after the changes in financing costs. This factor will tend to favorably affect a regulated utility company's earnings and dividends in times of decreasing costs, but conversely, will tend to adversely affect earnings and dividends when costs are rising. Certain utility companies have experienced full or partial deregulation in recent years. These utility companies are frequently more similar to industrial companies in that they are subject to greater competition and have been permitted by regulators to diversify outside of

their original geographic regions and their traditional lines of business. These opportunities may permit certain utility companies to earn more than their traditional regulated rates of return. Some companies, however, may be forced to defend their core business and may be less profitable. In addition, natural disasters, terrorist attacks, government intervention or other factors may render a utility company's equipment unusable or obsolete and negatively impact profitability. Among the risks that may affect utility companies are the following: risks of increases in fuel and other operating costs; the high cost of borrowing to finance capital construction during inflationary periods; restrictions on operations and increased costs and delays associated with compliance with environmental and nuclear safety regulations; and the difficulties involved in obtaining natural gas for resale or fuel for generating electricity at reasonable prices. Other risks include those related to the construction and operation of nuclear power plants, the effects of energy conservation and the effects of regulatory changes.

Finland Risk. Investment in Finnish issuers involves risks that are specific to Finland, including, legal, regulatory, political, currency, security and economic risks. Finland's economy, among other things, depends on imported raw materials, energy and components for its manufactured products. As a result, Finland is dependent on trading relationships with certain key trading partners, including Germany, Sweden and other EU countries, Russia and the U.S. Metals, engineering and timber are Finland's main industries, and major exports include electronics and machinery. Finland's reliance on these sectors makes it vulnerable to economic downturns in, among other sectors, the technology and industrials sectors. Finland's economy is facing demographic challenges, including an aging population, that could lead to labor supply shortages in the near future.

Recent Market Events. Periods of market volatility may occur in response to market events, public health emergencies, natural disasters or climate events, and other economic, political, and global macro factors. U.S. and international markets have recently experienced, and may continue to experience, periods of significant volatility due to various factors, including uncertainty regarding inflation and central banks' interest rate changes, the possibility of a national or global recession, trade tensions and tariffs, and political and geopolitical events. In addition, wars or threats of war and aggression, such as Russia's invasion of Ukraine and conflicts among nations and militant groups in the Middle East, have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally, each of which may negatively impact the Fund's investments. Additionally, since the change in the U.S. presidential administration in 2025, the administration has pursued an aggressive foreign policy agenda, including through suggestions that the United States should control certain sovereign foreign territories, attempts to restructure federal government agencies with international influence, and the imposition of tariffs and trade barriers on certain foreign countries, including China and long-time U.S. allies. In particular, the imposition of tariffs has led to retaliatory tariffs by targeted foreign countries and could lead to retaliatory tariffs by additional foreign countries, as well as increased and prolonged market volatility, and sector-specific downturns in industries reliant on international trade. The administration has also sought to reduce the headcount of and freeze or reduce funding available to certain U.S. government agencies. Such efforts may continue throughout U.S. federal agencies, which could increase administrative burdens on remaining government employees, increase processing times of company filings, alter regulatory policymaking, and increase regulatory volatility. These efforts and other similar actions may have unforeseen consequences on the economy and markets generally, and could negatively impact the Fund.

Raising the ceiling on U.S. government debt and passing periodic legislation to fund the government have become increasingly politicized. Any failure to do either could lead to a default on U.S. government obligations, with unpredictable consequences for economies and markets in the United States and elsewhere.

Changing interest rate environments (whether downward or upward) impact various sectors of the economy and asset classes in different ways. For example, low interest rate environments tend to be positive for the equity markets, whereas high interest rate environments tend to apply downward pressure on earnings and equity prices. It is difficult to accurately predict the pace at which interest rates might change, the timing, frequency or magnitude of any such changes in interest rates, or when such changes might stop or reverse course. Unexpected changes in interest rates could lead to significant market volatility or reduce liquidity in certain sectors of the market.

The events and circumstances described above could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance. Other market events may cause similar disruptions and effects.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause a Fund, the Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. A cybersecurity incident may disrupt the processing of shareholder transactions, impact a Fund's ability to calculate its NAV, and prevent shareholders from redeeming their Shares.

Issuers of securities a Fund has investment exposure to are also subject to cybersecurity risks and the value of those securities could decline if the issuers experience cybersecurity incidents. Cybersecurity incidents affecting such companies may disrupt business operations, exploit security weaknesses, result in equipment failures, data breaches, violations of applicable privacy and other laws, financial losses, reputational damage, loss of customer relationships, regulatory fines, remediation costs or other liabilities, and adversely affect the value of a Fund's investments. Companies in industries that rely on technology, telecommunications networks, operational systems, digital infrastructure, intellectual property, customer data, or other information systems are particularly susceptible to these risks. The use of artificial intelligence ("AI"), machine learning and other emerging technologies may exacerbate cybersecurity and operational risks.

While a Fund, its service providers, and the companies it has investment exposure to may have established business continuity plans and risk management systems designed to prevent, detect and mitigate cybersecurity incidents, there are inherent limitations in such plans and systems, including the possibility that certain risks have not been identified and that prevention, detection or remediation efforts may not be successful.

Non-Principal Risks

Inflation Risk. Inflation may reduce the intrinsic value of increases in the value of the Funds. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the value of the Funds' assets can decline as can the value of the Funds' distributions.

Legislation and Litigation Risk. Legislation or litigation that affects the value of securities held by the Funds may reduce the value of the Funds. From time to time, various legislative initiatives are proposed that may have a negative impact on certain securities in which the Funds invest. In addition, litigation regarding any of the securities owned by the Funds may negatively impact the value of the Shares. Such legislation or litigation may cause the Funds to lose value or may result in higher portfolio turnover if the Advisor determines to sell such a holding.

The Funds are series of Investment Managers Series Trust II, an investment company registered under the 1940 Act. The Funds are treated as separate funds with their own investment objectives and policies. The Trust is organized as a Delaware statutory trust. The Board is responsible for the overall management and direction of the Trust. The Board elects the Trust's officers and approves all significant agreements, including those with the Advisor, custodian and fund administrative and accounting agent.

Investment Advisor

AXS Investments LLC, a Delaware limited liability company, serves as the Fund's Advisor pursuant to an investment management agreement (the "Investment Advisory Agreement"). AXS is located at 181 Westchester Avenue, Suite 402, Port Chester, New York 10573.

In its capacity as investment Advisor, AXS manages the Funds' investments subject to the supervision of the Board. AXS also arranges for transfer agency, custody, fund administration, distribution and all other services necessary for the Funds to operate. Further, AXS continuously reviews, supervises, and administers the Funds' investment program.

Pursuant to the Investment Advisory Agreement between the Advisor and the Trust, on behalf of the Funds, each Fund has agreed to pay an annual unitary management fee of 1.49% of its average daily net assets. This unitary management fee is designed to pay each Fund's expenses and to compensate the Advisor for the services it provides to the Fund. Out of the unitary management fee, the Advisor pays substantially all expenses of the Fund, including the cost of transfer agency, custody, fund administration, legal, audit and other service and license fees. However, the Advisor is not responsible for advisory fee, interest, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, and distribution fees and expenses paid by each Fund under any distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act.

Portfolio Managers

Parker Binion, Portfolio Manager, Chief of Compliance and Head of Investments of AXS, serves as portfolio manager for the Funds. Mr. Binion joined AXS in January 2021. Prior to joining AXS, Mr. Binion was a portfolio manager of Kerns Capital Management, Inc. since September 2014, and was responsible for managing the firm's separately managed account strategies and hedging/net exposure strategies. Prior to 2014, Mr. Binion was an investment advisor representative with Heritage Capital from 2012 to 2014. He holds an A.B. in political science with a concentration in economics from Duke University and a J.D. with honors from the University of Texas at Austin.

Travis Trampe, Portfolio Manager of AXS, serves as portfolio manager for the Funds. Mr. Trampe joined AXS in 2022. Prior to joining AXS, Mr. Trampe was a portfolio manager with ETF issuers and asset management firms for over 15 years, including most recently from 2016 to 2021, where he was responsible for managing ETFs, mutual funds, UCITS and other fund vehicles. Mr. Trampe's asset management tenure includes longtime experience in portfolio management, trade execution and fund operations in U.S. and global securities markets. Mr. Trampe holds a B.S. in finance and mathematics from Nebraska Wesleyan University.

The Funds' SAI provides additional information about the compensation structure for the portfolio managers, other accounts that the portfolio managers manage and the ownership of Shares by the portfolio managers.

Manager of Managers Structure

The Funds and AXS have received an exemptive order from the SEC to operate under a manager of managers structure that permits AXS, with the approval of the Board, to appoint and replace sub-advisors, enter into sub-advisory agreements, and materially amend and terminate sub-advisory agreements on behalf of each Fund without shareholder approval (the "Manager of Managers Structure"). Under the Manager of Managers Structure, AXS has ultimate responsibility, subject to oversight by the Board, for overseeing a Fund's sub-advisor(s) and recommending to the Board the hiring, termination, or replacement of any such sub-advisor(s). The exemptive order does not apply to any sub-advisor that is affiliated with a Fund or AXS.

The Manager of Managers Structure enables each Fund to operate with greater efficiency and without incurring the expense and delays associated with obtaining shareholder approvals for matters relating to sub-advisors or sub-advisory agreements. The Manager of Managers Structure does not permit an increase in the overall management and advisory fees payable by a Fund without shareholder approval. Shareholders will be notified of any changes made to sub-advisors or sub-advisory agreements within 90 days of the changes.

A discussion regarding the basis for the Board's approval of the Advisory Agreement for each Fund will be available in the Funds' first Form N-CSR filing.

Fund Shares are listed for trading on the Exchange. When you buy or sell the Funds' Shares on the secondary market, you will pay or receive the market price. You may incur customary brokerage commissions and charges and may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. The Shares of the Funds will trade on the Exchange at prices that may differ to varying degrees from the daily NAV of such shares. A "Business Day" with respect to the Funds is any day on which the Exchange is open for business. The Exchange is generally open Monday through Friday and is closed on weekends and the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

Each Fund's NAV is calculated as of 4:00 p.m. Eastern time, the normal close of regular trading on the NYSE, on each day the NYSE is open for trading. If for example, the NYSE closes at 1:00 p.m. Eastern time, the Funds' NAVs would still be determined as of 4:00 p.m. Eastern time. In this example, portfolio securities traded on the NYSE would be valued at their closing prices unless the Trust's Valuation Committee determines that a "fair value" adjustment is appropriate due to subsequent events. The NAV is determined by dividing the value of a Fund's portfolio securities, cash and other assets (including accrued interest), less all liabilities (including accrued expenses), by the total number of outstanding shares. A Fund's NAV may be calculated earlier if permitted by the SEC. The NYSE is closed on weekends and most U.S. national holidays. However, foreign securities listed primarily on non-U.S. markets may trade on weekends or other days on which the Fund does not value its shares, which may significantly affect a Fund's NAV on those days.

Each Fund's securities generally are valued at market price. Securities are valued at fair value when market quotations are not readily available. The Board has adopted procedures to be followed when a Fund must utilize fair value pricing, including when reliable market quotations are not readily available, when a Fund's pricing service does not provide a valuation (or provides a valuation that, in the judgment of the Advisor, does not represent the security's fair value), or when, in the judgment of the Advisor, events have rendered the market value unreliable (see, for example, the discussion of fair value pricing of foreign securities in the paragraph below). Valuing securities at fair value involves reliance on the judgment of the Advisor and the Board (or a committee thereof), and may result in a different price being used in the calculation of a Fund's NAV from quoted or published prices for the same securities. Fair value determinations are made in good faith in accordance with procedures adopted by the Board. There can be no assurance that a Fund will obtain the fair value assigned to a security if it sells the security.

In certain circumstances, a Fund employs fair value pricing to ensure greater accuracy in determining daily NAV and to prevent dilution by frequent traders or market timers who seek to exploit temporary market anomalies. Fair value pricing may be applied to foreign securities held by a Fund upon the occurrence of an event after the close of trading on non-U.S. markets but before the close of trading on the NYSE when a Fund's NAV is determined. If the event may result in a material adjustment to the price of a Fund's foreign securities once non-U.S. markets open on the following business day (such as, for example, a significant surge or decline in the U.S. market), a Fund may value such foreign securities at fair value, taking into account the effect of such event, in order to calculate the Fund's NAV.

Other types of portfolio securities that a Fund may fair value include, but are not limited to: (1) investments that are illiquid or traded infrequently, including "restricted" securities and private placements for which there is no public market; (2) investments for which, in the judgment of the Advisor, the market price is stale; (3) securities of an issuer that has entered into a restructuring; (4) securities for which trading has been halted or suspended; and (5) fixed income securities for which there is not a current market value quotation.

Frequent Purchases and Redemptions of Fund Shares

The Funds do not impose any restrictions on the frequency of purchases and redemptions of Creation Units; however, the Funds reserve the right to reject or limit purchases at any time as described in the SAI. When considering that no restriction or policy was necessary, the Board evaluated the risks posed by arbitrage and market timing activities, such as whether frequent purchases and redemptions would interfere with the efficient implementation of the Funds' investment

strategies, or whether they would cause a Fund to experience increased transaction costs. The Board considered that, unlike traditional mutual funds, Shares of the Funds are issued and redeemed only in large quantities of shares known as Creation Units available only from the Funds directly to APs, and that most trading in the Funds occurs on the Exchange at prevailing market prices and does not involve the Funds directly. Given this structure, the Board determined that it is unlikely that trading due to arbitrage opportunities or market timing by shareholders would result in negative impact to the Funds or their shareholders. In addition, frequent trading of Shares of the Funds done by APs and arbitrageurs is critical to ensuring that the market price remains at or close to NAV.

Availability of Information

Each Business Day, the following information will be available at www.tradretfs.com with respect to each Fund: (i) information for each portfolio holding that will form the basis of the next calculation of a Fund's NAV per share; (ii) a Fund's NAV per share, market price, and premium or discount, each as of the end of the prior Business Day; (iii) a table showing the number of days a Fund's Shares traded at a premium or discount during the most recently completed calendar year and the most recently completed calendar quarter since that year; (iv) a line graph showing Fund Share premiums or discounts for the most recently completed calendar year and the most recently completed calendar quarter since that year; (v) a Fund's median bid-ask spread over the last thirty calendar days; and (vi) if during the past year a Fund's premium or discount was greater than 2% for more than seven consecutive trading days, a statement that a Fund's premium or discount, as applicable, was greater than 2% and a discussion of the factors that are reasonably believed to have materially contributed to the premium or discount.

Fund Distributions

The Funds pay out dividends from their net investment income annually and distributes their net capital gains, if any, to investors at least annually.

Dividend Reinvestment Service

Brokers may make available to their customers who own Shares of the Funds the Depository Trust Company book-entry dividend reinvestment service. If this service is available and used, dividend distributions of both income and capital gains will automatically be reinvested in additional whole Shares of the respective Fund purchased on the secondary market. Without this service, investors would receive their distributions in cash. To determine whether the dividend reinvestment service is available and whether there is a commission or other charge for using this service, consult your broker. Brokers may require a Fund's shareholders to adhere to specific procedures and timetables.

Federal Income Tax Consequences

The following discussion is very general and does not address investors subject to special rules, such as investors who hold Fund Shares through an IRA, 401(k) plan or other tax-advantaged account. The SAI contains further information about taxes. Because each shareholder's circumstances are different and special tax rules may apply, you should consult your tax advisor about your investment in a Fund.

You will generally have to pay federal income taxes, as well as any state or local taxes, on distributions received from a Fund, whether paid in cash or reinvested in additional shares. If you sell Fund Shares, it is generally considered a taxable event. Distributions of net investment income, other than distributions a Fund reports as "qualified dividend income," are taxable for federal income tax purposes at ordinary income tax rates. Distributions of net short-term capital gains are also generally taxable at ordinary income tax rates. Distributions from a Fund's net capital gain (i.e., the excess of its net long-term capital gain over its net short-term capital loss) are taxable for federal income tax purposes as long-term capital gain, regardless of how long the shareholder has held Fund Shares.

Dividends paid by a Fund (but none of a Fund's capital gain distributions) may qualify in part for the dividends-received deduction available to corporate shareholders, provided certain holding period and other requirements are satisfied. Distributions that a Fund reports as "qualified dividend income" may be eligible to be taxed to non-corporate shareholders at the reduced rates applicable to long-term capital gain if derived from the Fund's qualified dividend income and/or if certain other requirements are satisfied. "Qualified dividend income" generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market.

Since each Fund's income is derived primarily from sources that do not pay dividends, it is not expected that a substantial portion of the dividends paid by the Funds will qualify either for the dividends-received deduction for corporations or for any favorable U.S. federal income tax rate available to non-corporate shareholders on "qualified dividend income."

You may want to avoid buying Shares of a Fund just before it declares a distribution (on or before the record date), because such a distribution will be taxable to you even though it may effectively be a return of a portion of your investment.

Although distributions are generally taxable when received, dividends declared in October, November or December to shareholders of record as of a date in such month and paid during the following January are treated as if received on December 31 of the calendar year when the dividends were declared.

Information on the federal income tax status of dividends and distributions is provided annually.

Dividends and distributions from a Fund and net gain from sales of Fund Shares will generally be taken into account in determining a shareholder's "net investment income" for purposes of the 3.8% Medicare contribution tax applicable to certain individuals, estates and trusts.

If you do not provide your Fund with your correct taxpayer identification number and any required certifications, you will be subject to backup withholding on your dividends and other distributions. The backup withholding rate is currently 24%.

Dividends and certain other payments made by a Fund to a non-U.S. shareholder are subject to withholding of federal income tax at the rate of 30% (or such lower rate as may be determined in accordance with any applicable treaty). Dividends that are reported by a Fund as "interest-related dividends" or "short-term capital gain dividends" are generally exempt from such withholding. In general, a Fund may report interest-related dividends to the extent of its net income derived from U.S.-source interest and a Fund may report short-term capital gain dividends to the extent its net short-term capital gain for the taxable year exceeds its net long-term capital loss. Backup withholding will not be applied to payments that have been subject to the 30% withholding tax described in this paragraph.

Under legislation commonly referred to as "FATCA," unless certain non-U.S. entities that hold shares comply with requirements of the Internal Revenue Service (the "IRS") that will generally require them to report information regarding U.S. persons investing in, or holding accounts with, such entities, a 30% withholding tax may apply to dividends payable to such entities. A non-U.S. shareholder may be exempt from the withholding described in this paragraph under an applicable intergovernmental agreement between the United States and a foreign government, provided that the shareholder and the applicable foreign government comply with the terms of the agreement.

Some of the Funds' investment income may be subject to foreign income taxes that are withheld at the country of origin. Tax treaties between certain countries and the United States may reduce or eliminate such taxes, but there can be no assurance that the Fund will qualify for treaty benefits.

An AP who exchanges securities for Creation Units generally will recognize a gain or a loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time and the sum of the exchanger's aggregate basis in the securities surrendered plus the amount of any cash paid for such Creation Units. A person who redeems Creation Units will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of any securities received plus the amount of any cash received for such Creation Units. The IRS, however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales," or on the basis that there has been no significant change in economic position.

Any gain or loss realized upon a creation of Creation Units will be treated as a capital gain or loss if the AP holds the securities exchanged therefor as capital assets, and otherwise will be ordinary income or loss. Similarly, any gain or loss realized upon a redemption of Creation Units of a Fund will be treated as a capital gain or loss if the AP holds the Shares of the Fund comprising the Creation Units as capital assets, and otherwise will be ordinary income or loss. Any capital gain or loss realized upon the creation of Creation Units will generally be treated as a long-term capital gain or loss if the securities exchanged for such Creation Units have been held for more than one year, and otherwise will be a short-term capital gain or loss. Any capital gain or loss realized upon the redemption of Creation Units of a Fund will generally be treated as a long-term capital gain or loss if the Shares of the Fund comprising the Creation Units have been held for more than one year, and otherwise, will generally be a short-term capital gain or loss. Any capital loss realized upon a redemption of Creation Units held for 6 months or less will be treated as a long-term capital loss to the extent of any amounts treated as distributions to the applicable AP of long-term capital gains with respect to the Creation Units (including any amounts credited to the AP as undistributed capital gains).

Each Fund has the right to reject an order for Creation Units if the purchaser (or a group of purchasers) would, upon obtaining the Shares of the Fund so ordered, own 80% or more of the outstanding Shares of the Fund and if, pursuant to Section 351 of the Code, the Fund would have a basis in any securities different from the market value of such securities on the date of deposit. Each Fund also has the right to require information necessary to determine beneficial share ownership for purposes of the 80% determination. If a Fund does issue Creation Units to a purchaser (or a group of purchasers) that would, upon obtaining the Shares of the Fund so ordered, own 80% or more of the outstanding Shares of the Fund, the purchaser (or a group of purchasers) may not recognize gain or loss upon the exchange of securities for Creation Units.

Persons purchasing or redeeming Creation Units should consult their own tax advisors with respect to the tax treatment of any creation or redemption transaction.

DISTRIBUTOR

ALPS Distributors, Inc. (the "Distributor") serves as the distributor of Creation Units for the Funds on an agency basis. The Distributor does not maintain a secondary market in Shares.

The Trust has adopted a Distribution and Service Plan pursuant to Rule 12b-1 under the 1940 Act. In accordance with its Rule 12b-1 plan, the Funds are authorized to pay an amount up to 0.25% of their average daily net assets each year to reimburse the Distributor for amounts expended to finance activities primarily intended to result in the sale of Creation Units or the provision of investor services. The Distributor may also use this amount to compensate securities dealers or other persons that are APs for providing distribution assistance, including broker-dealer and shareholder support and educational and promotional services. The Funds do not and have no current intention of paying 12b-1 fees. However, in the event 12b-1 fees are charged in the future, because these fees are paid out of a Fund's assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

FUND SERVICE PROVIDERS

Co-Administrators. UMB Fund Services, Inc. ("UMBFS"), located at 235 West Galena Street, Milwaukee, Wisconsin 53212, and Mutual Fund Administration, LLC ("MFAC"), located at 2220 E. Route 66, Suite 226, Glendora, California 91740 (collectively the "Co-Administrators"), act as co-administrators for the Funds. Pursuant to the Co-Administration Agreement, the Co-Administrators receive a fee for administration services based on each Fund's average daily net assets, which is paid by the Advisor.

Transfer Agent. UMB Fund Services, Inc., located at 235 West Galena Street, Milwaukee, Wisconsin 53212, serves as the Funds' transfer agent. The transfer agent provides record keeping and shareholder services.

Custodian. UMB Bank, n.a., located at 928 Grand Boulevard, Kansas City, Missouri 64106, serves as the Funds' custodian. The custodian holds the securities, cash and other assets of the Fund.

Fund Accounting Agent. UMB Fund Services, Inc., located at 235 West Galena Street, Milwaukee, Wisconsin 53212, serves as the fund accounting agent for the Funds. The fund accounting agent calculates each Fund's daily NAV.

Legal Counsel. Morgan, Lewis & Bockius LLP ("Morgan Lewis"), located at 600 Anton Boulevard, Suite 1800, Costa Mesa, California 92626, serves as legal counsel to the Trust and to the Independent Trustees.

Independent Registered Public Accounting Firm. Tait, Weller & Baker LLP, located at Two Liberty Place, 50 S. 16th Street, Suite 2900, Philadelphia, Pennsylvania 19102, serves as the Funds' independent registered public accounting firm and is responsible for auditing the annual financial statements of each Fund.

Investments by Other Registered Investment Companies

For purposes of the 1940 Act, each Fund is treated as a registered investment company. Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including Shares of the Funds. Rule 12d1-4 under the 1940 Act permits registered investment companies to invest in ETFs offered by the Trust, including the Funds, beyond the limits of Section 12(d)(1) subject to certain terms and conditions, including that such registered investment companies enter into an agreement with the Trust.

Continuous Offering

The method by which Creation Units are purchased and traded may raise certain issues under applicable securities laws. Because new Creation Units are issued and sold by each Fund on an ongoing basis, at any point a "distribution," as such term is used in the Securities Act of 1933, as amended (the "Securities Act"), may occur. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the transfer agent, breaks them down into individual shares, and sells such shares directly to customers, or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to categorization as an underwriter.

Broker-dealer firms should also note that dealers who are not "underwriters" but are effecting transactions in Shares of the Funds, whether or not participating in the distribution of Shares of the Funds, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(a)(3) of the Securities Act is not available with respect to such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer-firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with Shares of the Funds that are part of an unsold allotment within the meaning of Section 4(a)(3)(C) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares of the Funds are reminded that under Rule 153 under the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on the Exchange is satisfied by the fact that the Funds' Prospectus is available on the SEC's electronic filing system. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

FINANCIAL HIGHLIGHTS

The Funds are new and have no performance history as of the date of this prospectus. Financial information therefore is not available.

Statement of Additional Information (SAI)

The SAI provides additional details about the investments and techniques of the Funds and certain other additional information. A current SAI is on file with the SEC and is incorporated into this Prospectus by reference. This means that the SAI is legally considered a part of this Prospectus even though it is not physically within this Prospectus.

Shareholder Reports and Financials and Other Information

Additional information about each Fund's investments will be available in the Fund's annual and semi-annual reports to shareholders and the Fund's Financials and Other Information, which are each included in the Fund's Form N-CSR filings. In the Fund's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund's performance during its most recent fiscal year. In the Fund's Financials and Other Information, you will find the Fund's annual and semi-annual financial statements.

The Funds' SAI, annual and semi-annual reports, and Financials and Other Information will be available, free of charge, on the Funds' website at www.tradretfs.com. You can also obtain a free copy of the Funds' SAI or annual and semi-annual reports, request other information, or inquire about the Funds by contacting a broker that sells Shares of the Funds or by calling the Funds at 1-888-52TRADR (1-888-5287237).

Reports and other information about the Funds are also available:

- Free of charge, on the SEC's EDGAR Database on the SEC's Internet site at http://www.sec.gov; or
- For a duplication fee, by electronic request at the following e-mail address: publicinfo@sec.gov.
